

Dragon continues to stride ahead in its quest to provide the best model kits. Our goal is simple - to provide the most accurate, the most convenient, and the most comprehensive kits for you, the modeler. In one box, you will find everything you need to produce a highly accurate scale model. Our kits are brimming with a host of materials and extras, allowing you to produce masterpieces that a pro would be proud of!

Dragon's research and development team are constantly searching for innovative materials and methods to improve our model lines. From initial concept to final product, Dragon is able to bring you model kits that excel. The use of computer-aided design gives the very best results and accuracy. Slide mold technology allows us to produce even complex items in one piece. Magic Tracks give you the most convenient individual track links ever. After extensive research we have created Dragon Styrene, an exciting new material with superior qualities. This allows you to experience an unheralded degree of detail unavailable in standard styrene. Our new concept of 3-in-1 kits offers the modeler the choice of making any one of three variants in the box.

With such varied multi-media bonus parts as photo-etched metal, brass ammunition shells, metal tow cables, sets of figures, extra decal options, metal gun barrels, vinyl parts, and more, each carefully crafted kit is packed with extras. The end result of Dragon's innovation is a kit that offers you unparalleled accuracy, ease of construction and maximum enjoyment. Recapture the excitement of opening a kit!

Our **3 in 1** kits offer three distinct variants, allowing modelers the choice of building any one of them. Each variant is fully and faithfully reproduced and no details are sacrificed. Thus each kit satisfies with a multitude of parts, alongside all the extras that Dragon kits normally feature. The **3 in 1** concept gives you more options, and greater value for money.

1/72 ARMOR PRO

This series of 1:72 scale vehicles is designed for the discerning modeler who is seeking even greater levels of detail. Each kit contains more options and multi-material parts to help you achieve a superior finish to your model. Specific features vary from kit to kit, but may include such options as:

- metal tow cables
- individual track links
- zimmerit coating
- decals with an even wider selection of markings
- comprehensive choice of photo etched metal parts
- a very fine level of details

WORLD'S FIRST

1/72 SCALE INJECTION ZIMMERIT PASTE™

This is a new technique pioneered and patented by Dragon. Now there is no more need to waste your time messing around with putty on your German tanks! Dragon has removed this clumsy, time-consuming process by introducing a zimmerit coating that is integrally molded. What's more, it is accurately scaled, looks authentic, and because it is plastic, it can be easily worked.

INNOVATION & TECHNOLOGY

As part of Dragon's commitment to using cutting edge technology, we are proud to introduce DS (Dragon Styrene), a new type of styrene. This has been carefully developed and formulated by our research and development team to achieve better molding results. DS has all the advantages and workability properties of standard styrene, but it holds greater detail that only products such as vinyl or resin have. Parts that require higher definition can be molded with ease using DS, but still be worked and glued like styrene.

Assembling individual track links can be a laborious, time-consuming task . . . until Dragon came up with the solution, that is. EZ Track takes away all the frustration of removing links from sprues and having to clean them up. Instead EZ Track offers you pre-cut, ready-to-assemble links. Assemble and glue them like normal individual links, but say goodbye to all that agony of filing and sanding them!

Magic Tracks

One of Dragon's latest innovations is Magic Tracks. As with EZ Tracks they come ready to assemble, with no clean up necessary. Their added benefit is that they snap together through a tight friction fit, meaning they can be assembled in a matter of minutes. All that is necessary is a light application of glue after assembly and fitting. This is the magic of Magic Tracks.

Slide Mold Technology

By utilizing slide mold technology, we can manufacture parts that are more detailed and complex. 3-D shapes, hollow tubes and barrels, one-piece muzzle brakes are now a reality, thanks to this type of molding. This results in convenience and ease for you, with parts that are accurately aligned and shaped. Beginning with computer aided design right through to molding, the whole process is computerized. The result is a perfectly accurate scale replica of the original.

Bonus Items

Dragon kits are overflowing with many extras. These vary depending on the kit, but feature different materials. You can expect to find such bonus items as brass ammunition shells and width indicator poles, photo etched frets, vinyl items of clothing, a wide choice of decal options, metal tow cables, a bonus set of figures and clear plastic parts. These are all part of the package to enhance your finished model and raise the level of detail to new heights.

Zimmerit

On some specific models, zimmerit is molded already. This releases you from the fiddly job of adding zimmerit yourself with putty, and you are guaranteed an authentic look straight from the box. Because it is plastic it can still be adapted and worked to suit your taste.
