BOBBY MCGEE PRO-SERIES “NANO” IWB HOLSTER

After many years of concealed carry and competitive shooting I set out to improve the comfort of our most popular IWB holster. I teamed up with our engineering team and came up with the “NANO”. This innovative design will be added to the “Bobby McGee Pro Series” product line.

First we used a thinner .080 material compared to our .093 material which of course makes for a more streamlined holster. Second we spread the distance of the loops apart which aided in stability while making the holster more contoured to the body without taking any more room on the belt. We have eliminated a second tension screw which aids in less material. On the body contact side we have contoured all areas possible providing comfort and eliminating hotspots. Lastly this holster is non collapsible and aids in a fast re-holster.

Try one of these holsters out and you will feel the comfort.

New Products For 2009

The knives include the **L.A.W.K.S.®** locking system. Lake and Walker Knife Safety. Designed by noted Knifemakers'/ Guild members Ron Lake and Michael Walker, into our new **Profili** folders. When the **LAWKS** lever is pushed forward with a flick of the thumb, the knife becomes a virtual fixed blade, and the locking liner is virtually impossible to release by the most vigorous use until the **LAWKS** lever is retracted. that provides the user with an added measure of safety.

PROFILI

Fixed Blade

Blade Steel- N690CO
Blade thickness- 5mm

UNIVERSAL LOCKING UTILITY UTILITY LOCKING UTILITY

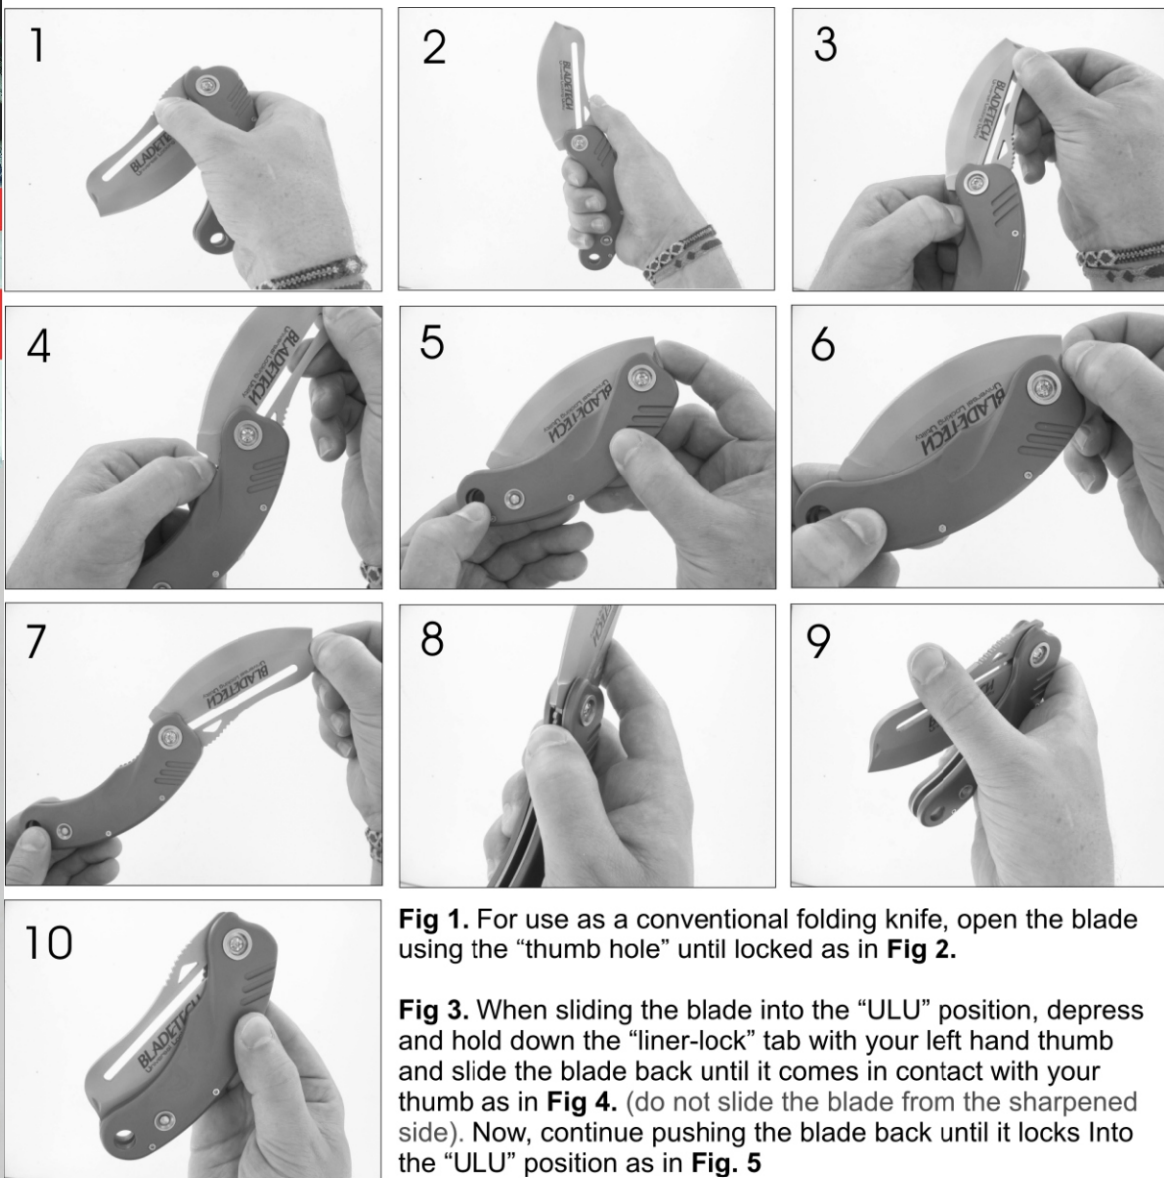

Fig 1. For use as a conventional folding knife, open the blade using the "thumb hole" until locked as in **Fig 2**.

Fig 3. When sliding the blade into the "ULU" position, depress and hold down the "liner-lock" tab with your left hand thumb and slide the blade back until it comes in contact with your thumb as in **Fig 4**. (do not slide the blade from the sharpened side). Now, continue pushing the blade back until it locks into the "ULU" position as in **Fig. 5**

Fig 6. To unlock the blade from the "ULU" position, push and hold the lock release button with your left-hand thumb while sliding the blade forward, using the "Thumb notch" with your right hand as in **6. & 7.Fig**

Make sure to slide the blade all the way back out into the "liner-lock" position before attempting to depress the liner and fold back into the closed position as in **Fig 8 & 9**. Only carry this knife in the position shown in **Fig 10**.
