

LYNN THOMPSON'S

SPECIAL PROJECTS

A DIVISION OF COLD STEEL®

NUMBER 31, SPRING 2006

WELCOME TO SPECIAL PROJECTS

Welcome to Special Projects. In the pages of this catalog, you will find a host of high performance edged weapons and tools including a number of new items never offered before. The entire Cold Steel® product line is also available, including limited production runs, collector's knives and closeouts. Every item in this catalog has been thoroughly tested and measures up to Cold Steel's® rigorous standards for quality and performance. Our descriptions are accurate. We do not exaggerate. Cold Steel® knives represent real solid value for the money and are backed by our unconditional 30-day guarantee of complete satisfaction.

In honor of their great and often unrecognized contribution to the betterment of our society, we are pleased to extend a 10% discount on the purchase of most of the items in this catalog to all active and reserve U.S. military, police, security, fire and emergency personnel. This offer is also extended to those who have honorably retired (I.D. required) from these professions after long years of service. We at Cold Steel® respect and appreciate those who place their lives on the line while making our nation a safer place to live.

LYNN C. THOMPSON, President, Cold Steel®, Inc.

PERFORMANCE

Good looks are important, in knives as much as in life! Perfect fits, clean lines, precise grinds and beautiful polishes all add value and satisfaction when you buy a knife. Often, the true beauty of a knife only becomes apparent when the knife is used!

At Cold Steel®, we believe that all of our knives must perform. We insist all of our knives deliver extraordinary performance for their asking price — "they must deliver their moneys worth".

In order to achieve this goal, we are vitally interested in all the elements that are critical to performance. When it comes to the blade, these include profile, thickness, blade geometry, edge geometry, steel and heat treatment. Every one of these factors is studied in minute detail to arrive at the optimum combination for a specific use. If the knife is a folder, we concentrate on the locking mechanism to ensure the strongest, safest construction. For handles, we strive to develop the perfect mix of materials and ergonomics to offer the most comfortable secure grip available. Above all, we TEST what we make! Rigorous testing is the only way to ensure we get the level of performance we demand.

VG-1

When considering a new material for a performance upgrade for the Cold Steel® Tanto, we tested seven different grades of steel including Shiro 2, V-SP-2, 10A, 440C, VG-10, ATS 34, and VG-1. Physical testing for sharpness, edge retention, point strength, shock, and ultimate blade strength showed that while many of the steels had increased performance in one or two testing categories, only one, VG-1, showed the greatest performance increases in the most critical categories. With an outstanding ability to retain an edge and proven strength in point and blade tests, VG-1 will provide Cold Steel® customers with superior performance previously unavailable in a stainless steel blade.

CARBON V®

Some Cold Steel® knives are made from Carbon V®, a high carbon, low alloy cutlery grade steel. This steel is superior in performance to most other steels due to its chemistry and also because of the close controls that we maintain at every stage of the manufacturing process. These controls begin at the steel mill where Cold Steel® specifies the desired microstructure of the steel. Once smelted, each steel shipment is microscopically checked for structural quality, cleanliness and chemical content by an independent metallurgist not in the mill's employ. The blades are then blanked parallel to the rolling direction of the steel plate to optimize grain flow along the length of the blade. The final step is a precise heat treatment sequence that was developed by Cold Steel® specifically for this custom steel. This heat treatment process is one of our most highly guarded trade secrets. It was arrived at over several years by using an exhaustive series of practical and metallurgical tests and observations.

AUS STAINLESS STEELS

The words "stainless steel" are misleading, because, in fact, all steel will stain or show discoloration if left in adverse conditions for a sufficient time. Steel is made "stainless" by adding Chromium and reducing its Carbon content during the smelting process. There is a serious performance trade-off with stainless steel. As the Chromium increases and the Carbon decreases, the steel becomes more "stainless". But, it also becomes more and more difficult to sharpen, and the edge-holding potential is seriously impaired. This is usually why most stainless knives are rarely razor-sharp and quickly lose what little edge they have.

In contrast, at Cold Steel® we use AUS 8A Stainless, a high carbon, low chromium steel that has proven itself to be the ultimate compromise between toughness and strength, edge holding, and resistance to corrosion.

AUS 6A is a medium to high carbon stainless which is tougher than ATS-34, 440C, ATS-55, etc., but still holds a good edge. This means it is particularly well suited for heavier, longer blades that are subjected to a lot of stress while chopping and hacking.

NEW

SOLID PROOF

Cold Steel® makes the world's strongest, sharpest knives and now for the third time in ten years we are offering our customers a free all new DVD called, "Solid Proof" to back up our claims. See for yourself as we put our knives through unbelievable torture testing. Watch them perform incredible feats of strength, sharpness, edge retention and above all cutting power. We know after watching this new DVD you'll want to share it with your family and friends. So call us today for your free copy!

**CALL 1-800-255-4716
TO GET YOUR FREE
COPY OF THE ALL NEW
SOLID PROOF DVD***

*DVD's are sent via USPS. Allow six to eight weeks for delivery. DVD is mailed poly-bagged with a Special Projects catalog. Free DVD offer is good only for residents of the U.S.A. For a shipping and handling fee of \$15.00, we will send the DVD to foreign countries. Please call for more information.

SAN MAI III®

San Mai means "three layers". It's the term given to the traditional laminated blades used by the Japanese for swords and daggers. Laminated construction is important because it allows different grades of steel to be combined in a single blade. A simple way to think of this type of construction is to imagine a sandwich: The meat center is hard, high carbon steel and the pieces of bread on either side are the lower-carbon, tough side panels. The edge of the blade should be hard to maximize edge holding ability, but if the entire blade was hard it could be damaged during the rigors of battle. For ultimate toughness the body of the blade must be able to withstand impact and lateral stresses. Toughness is generally associated with "softness" and "flexibility" in steel, so that, surprisingly, if a blade is made "tough" the edge won't be hard enough to offer superior edge holding. San Mai III® provides a blade with hard (higher carbon) steel in the middle for a keen, long lasting edge and tougher (lower-carbon) steel along the sides for flexibility. This laminate is 25% stronger than our incredibly tough AUS 8A Stainless.

420 SUB ZERO QUENCH

Cold Steel® has always sub zero quenched the blades that we have manufactured in Japan, and we are now adding this often omitted, yet crucial, process to the heat treating sequence of the new blades we are making in Taiwan.

Typically, stainless steel blades suffer from retained austenite after they have been heated to critical temperature and then air or gas cooled. The big drawback of this procedure is that it doesn't get the blades cold enough to assure complete transformation from an austenite to martensite grain structure. Only by freezing—sub zero quenching—stainless blades to 120 degrees below zero (Fahrenheit), will the austenite be completely transformed to martensite. This assures the blade will be as hard, strong, and wear resistant as it can possibly be.

5150

5150 is a medium carbon, low alloy steel that is particularly well suited to the hot forging process. This steel has the properties to harden well, making it ideal for heat treating blades that have a very thick cross section such as tomahawks, axes, etc. After the quenching process, blades will be completely hardened at Rc 55-60. The combination of carbon and alloy elements also produces an extremely tough and impact resistant steel in the hardened and tempered condition which is essential in a tool which is hafted and or thrown.

WARRANTY

We stand behind our knives 100%. We subject them to the highest standards in the industry and strive to make each one as perfect as possible. Our fixed blade sheath knives have a five year warranty to the original owner against defects in materials or workmanship. Our folding knives are warranted for one year.

Most of the tests shown on these pages and in our SOLID PROOF DVD are dangerous and should not be duplicated. ANY knife can be broken or damaged if subjected to sufficient abuse. ALL knives eventually wear out and must be replaced. These destructive tests constitute gross abuse of a knife. Duplicating them will void your warranty.

COLD STEEL® CHALLENGE

The second annual Cold Steel Challenge was held at Seaside Park in Ventura, California, during the weekend of September 24th and 25th, 2005. It was an extraordinary event, with knife and sword fighting competitions, and various throwing competitions.

We had the maximum number of entrants competing for the top honors with over \$10,000 in prizes being awarded overall! In addition to the competitive events

we again had our highly popular practice lanes that were open to the public where people could try out our throwers, the Bad Axe, Special Forces Shovel, and Samburu Spears.

During the noon break there were demonstrations and impromptu seminars given by experts in their fields. We had Anthony DeLongis there to give an exhibition of his skill with the bullwhip and the saber. Omulu Sul Capoeira

was there too and they gave some amazing martial arts demonstrations.

It was a great couple of days! Right now we are planning 2006's Cold Steel Challenge and thinking about what we can do to make it even bigger and better. For updates, photos of the '05 and '04 events, and more information about the 2006 Challenge, go to our website: www.coldsteel.com. We hope to see you there.

2006 SCHEDULED EVENTS

KNIFE FIGHTING SWORD FIGHTING THROWING CONTESTS:

- **THROWING KNIVES**
- **TOMAHAWKS**

**THE ENTIRE COLD
STEEL PRODUCT LINE
WILL BE ON SALE!**

COMPLETE CONTEST RULES,
ELIGIBILITY REQUIREMENTS, VENUES,
AND OTHER INFORMATION WILL BE
POSTED SOON ON OUR WEBSITE.
GO TO: WWW.COLDSTEEL.COM

On behalf of the San Diego Chuckers; Micah Posada, Todd Abrams and myself I want to thank you for the opportunity to participate in the Cold Steel Challenge.

We attend events all over the country and we all agree that the Cold Steel Challenge was the best run, and your staff was awesome. I'm sure their hard work and dedication is one of the reasons Cold Steel is so successful. It was also the most entertaining, all your demonstrations from sword and spear throwing to whip cracking and sword fighting were great. It's obvious you also thought about the small things that mean so much to the comfort of the participants such as ample restrooms, a first aid station, food and beverages for sale, even a security guard.

We also want to thank you for your generosity. All the prizes you gave away to the winners were simply mind-boggling. You are a very class act!

Thanks again for the great event. The Cold Steel Challenge will always be part of the throwing schedule for the San Diego Chuckers.

— C. B. Geddes, San Diego, CA

I attended the Cold Steel Challenge and really enjoyed it. I work for John T's in Visalia, CA and we carry many of your products. I competed in the Tomahawk and Torpedo throwing competitions and I didn't do as well as I could have hoped but I did enjoy myself. I just wanted to let you guys know I had a great time and think that you guys are doing a great job and have the best products I have seen to date. Thanks for making the Challenge possible and I look forward to the next event.

— R. Wheeler, Visalia, CA

HATAMOTO™

In feudal Japan one of the most highly coveted titles among a lord's high-ranking retainers was "Hatamoto". The fortunate Samurai on who this distinctive honor was bestowed was allowed immediate access to his lord, day and night, and was deemed trustworthy enough to wear his sword in his lord's presence.

Like its namesake, the Hatamoto™ was designed to be a knife worthy of great respect and trust. A knife you will treasure for years and one you can bet your life on in a pinch. The blade has been precision hollow ground out of our famous San Mai III® stainless, 25% stronger than any other stainless steel in the world. For piercing power it features a modified tanto point (first popularized by Lynn Thompson in the early 1980's). It pierces like a dagger yet remains resistant to bending or breaking. For cutting power, the edge is subtly curved and ground thin and honed to razor keenness so it will "bite" with even moderate pressure and deliver dramatically deep, gaping cuts with full power blows.

To have this remarkable blade come alive in your hand we

FROM 'SOLID PROOF'
THE HATAMOTO™
HOLDS 100 LBS.

have crafted a simple yet highly efficient handle that will accommodate a wide variety of grip styles. For strength, rigidity and security, we have resolutely insisted on thick Titanium liners for the frame and overlaid them with high friction G-10 scales that have been reinforced by forged Titanium bolsters. All handle components have been bolted together with the latest in high strength fasteners to form one homogenous unit of great strength and moderate weight.

Lock strength is absolutely critical in a knife like the Hatamoto™, that's why we have equipped it with the most reliable leaf spring locking mechanism on the market. Made of Titanium and fitted to extremely close tolerances it has proven almost impervious to the stress and shock that would destroy a lesser knife costing even three or four times as much.

Quick access and convenient carry are also attributes of the finest

tactical folders so we have outfitted the Hatamoto™ with a sleek yet effective pocket clip and thumb stud for lightning fast opening.

#60H Hatamoto™

Suggested Retail \$379.99

CALEDONIAN EDGE™

For almost a decade, Cold Steel® offered a small, wicked looking, boot knife called the Culloden®. It was based on the traditional Scottish "Black Knife" or "Skean Dhu", as it was more commonly referred to, in Gaelic, the ancient language of Scotland.

For the dawning years of this century, however, we have created an entirely new tactical folder, that takes some of its design cues from the ancient Skean Dhu.

Our Caledonian Edge™ features a number of modern variations and refinements on its older predecessor. The blade is made from virtually unbreakable San Mai III® laminated stainless, and, like the original Skean Dhu, features a thin, acutely pointed tip that's as sharp as the proverbial needle. It glides effortlessly through even the most puncture resistant materials. Additionally, its precisely and carefully hollow ground blade has been honed so sharp, it will shave hair from your arm as if you were using a straight razor.

The traditional jimping seen on the Skean Dhu of old has been retained and provides an aggressive, non-slip platform for one's thumb and forefinger, allowing for better control when using the blade to cut or pierce.

FROM 'SOLID PROOF'
THE CALEDONIAN
EDGE™ HOLDS
100 LBS.

The Caledonian Edge's™ handle sports a palm-hugging profile and a relatively thin cross section that augments its covert qualities. It's flat enough to resist rolling or

twisting in one's palm yet comfortable enough to accommodate a wide range of gripping styles. A perfect blend of strength and beauty, it features a superstructure of attractive, highly polished, black Micarta scales and custom Titanium bolsters that are bolted, utilizing the latest in high-tech fasteners, to a strong, yet lightweight Titanium liner substructure.

The Caledonian Edge's™ leaf spring locking mechanism will protect your fingers from its sharp edge. It's made from Titanium and is hand fitted to the closest tolerances possible. It's incredibly tough and reliable even when exposed to our most brutal tests.

For discreet carry and immediate access, the Caledonian Edge™ comes with a brightly polished stainless steel pocket clip and thumb stud on the blade. This arrangement allows a wide variety of carry options as well as lightning quick one handed opening.

BLACK SABLE™

Your friends may turn a pronounced shade of green—with envy that is—the first time you snap open your new Black Sable™ and they start eyeing that magnificent mirror polished blade. Of course, they'll plead with you to hand it over for closer inspection and of course they'll immediately

want to know where they can get one of their own. We all like to be in the spotlight now and then and when you're the proud owner of a Cold Steel® Black Sable™, not only will you have a finely crafted folder; you'll also have bragging rights that will last for years.

Consider the blade—made of hollow ground San Mai III® stainless steel and hand polished to a mirror shine—even the most jaded eyes will find it fascinating. But a Cold Steel® blade is more than just homage to style, this blade has enough substance to be frightfully effective. Every feature from its curved, upswept shape to its acute, reinforced point has been judiciously chosen to maximize cutting and piercing power. Just running your thumb over its razor sharp edge will tell you this is something to be reckoned with.

But no folder can stand on the merits of its blade alone. That's why Cold Steel® spared no expense or effort in making sure every other component corresponds to the blade in quality and performance. The distinctively shaped, pistol grip handle features a Titanium frame overlaid with highly polished black Micarta scales and forged Titanium bolsters that have been

matched together and bolted inseparably to the frame with the latest high tech fasteners.

To protect the fingers from the unintentional closure of the blade, the Black Sable™ has been fitted with Cold Steel's® state of the art "rocker" lock. A highly refined locking mechanism, perfected by Cold Steel® over the last eighteen years, that relies on extra strong springs, super close tolerances and other secret refinements to make it equal, if not superior, in strength, to any other lock on the market.

For carrying and operating convenience, the Black Sable™ comes with dual, mirror polished pocket clips (for ambidextrous operation), and double thumb studs for rapid deployment.

BLACK TALON™

When you purchase one of our new Black Talon™ tactical folders there's a phrase you'll start hearing more and more: "Man, that's one mean looking knife!"

The Black Talon™ is indeed an awe inspiring, ferocious looking knife. It's efficient both coming and going and will rip, cut,

or slash through just about any obstacle or material you put in its path. This is because of its needle sharp, talon-like point, and its sinuously curved blade. The blade is made from our own exclusive San Mai III® stainless steel so you know it will hold an edge for a long time and will rarely require re-sharpening.

The elegantly simple grip of this all-out cutting blade is strong and sturdy. It features a robust Titanium frame, which supports the forged Titanium bolsters and highly textured G-10 scales. The well built, yet highly refined, Titanium leaf spring lock will protect one's fingers from the Black Talon's™ razor sharp edge. This lock, in our tests, has proved itself peerless when it comes to withstanding great shock and stress.

For instant access, the Black Talon™ has a uniquely shaped thumb hole cut into the blade making it a snap to open with either hand. And for convenience and security there is a compact pocket clip and a steel lined lanyard hole. The clip is removable, so it can accommodate left and right-handed users alike.

AK-47™

#58LAK AK-47™
Suggested Retail \$99.99
SPECIAL PROJECTS: \$79.99

NEW

In 1947, Mikhail Kalashnikov, the legendary Russian gun designer, created the AK-47 assault rifle. Eventually adopted by the Red Army in 1949, it became famous as the "People's Rifle". Such renown was not unwarranted, as it was utterly reliable, rugged, simple to operate and maintain, economical, and effective at reasonable ranges. This weapon, and all it represents became the inspiration for our newest heavy-duty tactical knife, the AK-47™ folder. Designed by Andrew Demko, the AK-47™ possesses all of the attributes of its namesake, and perhaps a few more.

Built for hard and rugged use, the AK-47™'s handle is made with thick aircraft grade aluminum scales that are

bolted to steel liners, this creates a robust grip that is remarkably tough, rigid, and incomparably strong. The grip is also equipped with a unique pommel. Made of Grivory®,

the pommel features two lanyard holes, and can serve as a "less than lethal" percussion tool in a self-defense situation.

The hollow ground blade has been honed by hand until it reaches levels of sharpness only seen on a surgeon's scalpel. It's made from Japanese AUS 8A Stainless steel, then vacuum heat treated, and sub zero quenched to make it as tough and rugged as humanly possible. To complement such an exceptional blade, we have equipped

the AK-47™ with our Ultra Lock® locking mechanism. With our latest refinements and testing, this lock has

proven itself to be equal, perhaps even superior, to any other lock on the market in terms of strength and shock resistance.

Finally, to assure easy access, and swift operation, the AK-47™ comes with an ambidextrous pocket clip and our new patented thumb plate. The thumb plate has a dual purpose, it allows the knife to be drawn and quickly opened by snagging it on the edge of a pocket or it can be used like a conventional thumb stud for easy one-handed opening.

SPECIFICATIONS:

Blade: 3 1/2"	Overall: 9 1/4"	Thick: 4mm
Weight: 7.6 oz.	Steel: AUS 8A Stainless

TALWAR™ FOLDER

#60ST Talwar™ Folder
Suggested Retail \$459.99
SPECIAL PROJECTS: \$459.99*

NEW

*THE TALWAR™ IS HAND MADE AND IN EXTREMELY LIMITED SUPPLY. WE ARE SORRY BUT WE CAN'T OFFER OUR SPECIAL PROJECTS DISCOUNT OR MILITARY DISCOUNT ON THIS KNIFE.

Have you ever dreamed of being able to harness the cutting and piercing power of a sword and distill it down into a folder small enough to fit into your pocket? That's the essence of our new pocket sword, the Talwar™. Like Saladin's legendary sword, it will cut, slash, and pierce with astonishing effectiveness. Notice the blade, it's hollow ground from VG-1 San Mai III®, honed to razor sharpness and wickedly curved to facilitate the deadly draw cut. Additionally, it ends in a needle sharp, yet remarkably sturdy, point so it pierces as well as cuts.

Designed by Lynn C. Thompson, the Talwar™ blends the sleek style of the east with the dynamic technology of the west. Using a Titanium frame as a foundation, the pistol grip handle features highly polished black linen micarta slabs with deeply carved finger grooves that allow it to settle naturally in one's hand for maximum control. And

its curved shape allows for reverse, or palm reinforced gripping techniques. Additionally, a hard-hitting ball shaped pommel enhances the Talwar's™ versatility. Made from mirror polished stainless steel, it can be used as a striking tool to deliver blows to bony areas, nerve centers, and other soft targets. It can also serve as a secondary grasping point, allowing its user to extend his reach by as much as three inches.

The Talwar's™ lock is designed to adhere to Cold Steel's most stringent standards of quality, with a state of the art rocker lock that's peerless in the knife industry. It features extra strong springs, super tight tolerances, world class machining, as well as some extra promising refinements that can only be called "trade secrets." These features, we believe, make it superior to any other lock on the market.

To keep your pocket sword secure and close at hand and ready for action, the Talwar™ is aided by dual mirror polished pocket clips for ambidextrous operation and a unique removable thumb plate. The thumb plate allows the knife to be opened as it is drawn from one's pocket by snagging it on the edge of the pocket seam. It can also be used like a thumb-stud for one-handed opening operation.

Ti-LITE™

Reminiscent of 1950's styled switchblades, our Ti-Lite™ tactical folders, echo the swift lines of memorable classics.

Legal to carry almost everywhere, the AUS 8A Stainless steel blades feature razor sharp edges and sturdy, needle sharp points.

The handles, made of forged Titanium, are available with our original finish or with a polished, blue anodized finish. They have been CNC milled for a visually appealing look, and for maximum strength and safety, we have equipped our Ti-Lites™ with full length Titanium leaf spring locks (proven, in our tests, to hold 100 lbs).

Phil Boguszewski

For ease of carry, the Ti-Lites™ come equipped with a small, but unobtrusive steel pocket clip.

We are grateful to custom knife maker, Phil Boguszewski, for his design influence and help in the creation of the Ti-Lites.™

THE ZYTEL® HANDLED TI-LITES™

Custom quality folding knives, especially those manufactured with Titanium handles and Titanium leaf spring locks are undeniably strong, lightweight, and beautiful to look at, but they're also quite expensive.

We know that many of our customers love the look of our Ti-Lites™ but find the prices a little steep. So we have created some very affordable alternatives. The Zytel® Ti-Lite™ with a 4 inch blade mimics the look of its more expensive counterparts almost exactly, and our model that features a six inch blade is a completely unique Ti-Lite,™ virtually in a class by itself.

Instead of Titanium, we used 43% glass filled Zytel® for the handles and high quality stainless steel for the leaf spring lock and liners. The results are extraordinarily lightweight knives that are remarkably strong, sharp and good looking, at a price almost everyone can afford.

THE SPECTRE™

Inspiration for this new tactical folder came from custom knife maker Barry Dawson's neck knife design. That knife featured a slender blade, and a thick spine with a zero ground edge and a skeletonized handle. It was such a compelling concept that we created our own line of knives based upon Barry's original design, the "Spike™" series (see page 35). Now we've produced a new folding variation on that theme that we call the Spectre™.

The blade evokes Barry's original ideas, but is enhanced by a mirror polished surface and is styled with our own Talon point, a blade style which offers absolutely ferocious ripping, cutting and slashing power without compromising the point's ability to be used for piercing.

The Spectre™ is extremely light with a lean profile that fits the hand exceptionally well while offering a good solid grip. It has solid Titanium liners to give its understructure superior strength and the impressive black Micarta scales and polished Titanium bolsters give it a sophisticated exterior. Its so stunningly handsome, you'll be constantly looking for excuses to lift it out of your pocket to just to show it off.

For safety and convenience the Spectre™ features our peerless leaf spring locking mechanism. Several years of testing and subtle improvements in construction have made this one of the safest and most reliable locks available at any price.

For even greater versatility and usefulness, we have outfitted the Spectre™ with a slim, yet stylish, pocket clip and thumb stud so you can clip it to the pocket of thin, light weight trousers or a coat pocket and open it in a flash when needed.

LAND & SEA/RESCUE

When someone's life is in danger, there is often not enough time to fumble around trying to open a Swiss Army® or "tool" type knife and then saw frantically in a desperate bid to free them. Those knives have blades that are just too short, narrow and dull to immediately sever thick, tough, or fibrous material. When seconds count, the Land & Sea/Rescue™ Knife is more than equal to the challenge. In an emergency, it can be opened in the blink of an eye, and the innovative rocker lock allows worry-free deployment when a life is on the line. Once locked open, the blade can cut with the fury of a chain saw with its wide, flat ground surface and serrated edge.

The unique "sheep's foot" style AUS 8A Stainless blade is ideal for rescue situations because it is less likely to injure accident victims when cutting away seat belts or clothing. And the tough, Zytel® handle is contoured and deeply checkered for a solid, non-slip grip. The Land & Sea/Rescue™

Knife sports a small, but powerful steel pocket clip, to keep the blade within easy reach at all times.

GUNSITE™ FOLDERS

Cold Steel® is right on target with the Gunsite™ Folders—the first authorized and official knives of the Gunsite™ Training Center.

The state-of-the-art rocker lock, perfected by Cold Steel®, is the strongest mechanism of its kind, with extra stiff springs. The Tanto style blades are substantially wider than any competitor's and are ground thin and honed to razor sharpness. The result is superb control, shearing power, and penetration.

The Zytel® handle features a deeply checkered, oval cross section that's thick enough for strength and stiffness, yet doesn't feel "bulky". Nothing compares to the fit and finish of the Gunsite™ Folders, with precision parts milled and hand fitted to virtually custom quality. Like our Voyagers®, the Gunsite™ Folders come with a stainless steel pocket clip for easy, convenient carry.

VAQUERO® SERIES

The Vaquero® Series folders all feature our distinctive "S-Curve" clip point blade style. They are precision flat ground to form a long, shallow "V" shaped cross section. This is ideal for shearing through thick, fibrous materials such as manila rope, cable, hose, belts, etc. The serrated edges form a sinuous double curve. This means that whatever material is struck with the inward curving portion of the edge (near the hand) will automatically force the remaining curved edge entirely through.

These strong, handsome folders deliver an unequalled fit and finish. They are carefully machined and hand fitted by master craftsmen who take great pride in their work. Feel the power of the massively strong locking mechanisms as you

thumb one of these blades open. The deeply checkered, and ergonomically designed Zytel® handles are cleverly reinforced with enough rigidity, strength, and toughness to virtually last a lifetime. Double thumb studs on each side of the razor sharp blade allow you to open these folders with either hand in the blink of an eye.

For convenience, a black stainless steel pocket clip is included. This allows for safe and secure carry in any environment.

The series is available in four sizes, the largest being the six inch Vaquero® Grande, and the smallest featuring a three inch blade. Overall, the Vaqueros® represent an outstanding package of strength and workmanship, with singular good looks that give these knives a pronounced air of authority.

TRIPLE ACTION™

Packing an awesome punch, Cold Steel's® Triple Action™ proves that the power and strength of a formidable cutting tool doesn't require a folding knife with the weight of an anvil.

Closing to a length of only 5 inches and weighing only 3.5 ounces, the Triple Action™ Folding Knife is a dynamite innovation.

A super-tough blade of AUS 8A stainless steel provides superb cutting ability in the world's finest combination of blade strength and flexibility. The aircraft grade aluminum handle (roll engraved with a distinctive pattern) gives the Triple Action™ an exceptional look, and the pocket clip makes it easy to carry.

Cold Steel's® Triple Action™ Folder is among the safest knives you can carry. When closed, the blade is totally encapsulated by the locking cover, and when open the solid aluminum construction and heavy duty lock prevent the blade from closing. So, the Triple Action™ Folder is as strong as (or possibly even stronger than) a butterfly knife while also being legal to carry in most states where the butterfly is banned.

When closed, the Triple Action™ Folder is a force to be reckoned with. Its solid construction makes it very stiff, strong, and unyielding in tough situations, giving its user confidence in its effectiveness and eliminating any fear of breaking the knife. Remarkably well suited for use as an impact weapon to attack an opponent's nerve centers and repel or subdue an assailant, the closed Triple Action™ serves admirably as an improvised "Yawara" stick. Because it is extremely thin and flat, the hand encircles it comfortably and completely, promoting a very secure grip which will allow the striking of powerful blows.

VOYAGER® SERIES

Due to their light weight and convenience, Zytel® handled lockbacks have gained enormous popularity over somewhat heavier, traditional lockbacks with metal bolsters and wooden scale handles. Our Voyager® Series represents the definitive generation of these ultra-light knives, a line of folders that are sure to be the standard by which others are judged for years to come!

The Voyager® folders are made from the same premium AUS 8A stainless steel that goes into our famous Tantos. Ounce for ounce, they are far stronger than 99% of our competitor's folders. They feature precision milled and hand fitted parts with extra stiff springs, providing a lock that is super reliable, yet requires little maintenance and is easy to keep clean. The blades are extremely wide and ground thin at the edge for tremendous shearing potential. This thin edge allows us to hone the blade to astounding sharpness. Plus, the cutting surface is continuously curved along its entire length for the most efficient possible slicing action. Because of the high carbon content in the stainless steel, you'll find that the sharpness really lasts a surprisingly long time.

If you like serrations, you'll really appreciate our exclusive pattern. It offers the aggressive ripping action of serrated teeth, but with a twist. Our design features groups of very small teeth separated by wide, shallow arcs. This results in the benefits of both a plain and a serrated edge, so that the knife still cuts smoothly through almost any material.

The Voyager® Series offers all the advantages of the latest in lockback construction technology including lightning-quick one-handed opening, light weight and strength. The result is an appealing look with very modern styling. Every detail has been designed for maximum performance from the reinforced pivot pin and stainless steel pocket clip, to the grooved thumb shelf on the back of the knife for extra traction. The Zytel® handles are somewhat oval shaped in cross-section, increasing strength and stiffness. Yet, the handle doesn't feel or appear thicker due to the subtly contoured design. Zytel® is unparalleled as a handle material, as it doesn't contract or expand in heat or cold, and has an advantage over metal handled knives in that it won't become scratched or discolored with heavy use.

As tools, these lightweight, super sharp knives are appropriate in almost any environment from hunting and camping, to hiking and general utility chores. They can also readily fill specialty functions such as a boat or river knife, a chute knife or demanding police/survival/rescue applications.

RECON 1®

Cold Steel® is famous for raising the bar in the knife industry and our Recon 1® tactical folders are setting a standard that's hard to beat. Why? Because they are as tough as nails and will cut like a chain saw! Every facet of their construction has been over engineered to make them as strong, durable and effective as humanly possible. The blades are made out of AUS 8A stainless steel that's been vacuum heat treated and sub zero quenched, and the handles feature G-10 laminate scales, massively reinforced by heat treated steel liners and five locking bolts. To compliment their super tough blades and handles, they each feature our revolutionary Ultra Lock™ (patent pending), which practically precludes lock failure.

To compliment their tactical mission we have given each blade a tough black Teflon® finish. Our testing has shown this coating or finish offers three major advantages for use on tactical blades. The first is; it is highly resistant to scratches and abrasions while keeping rust at bay. The second is; it eliminates glare and light reflections which may give its user away. The third is; it's a superior lubricant, which causes the blade to slip through even tough material with markedly less friction. This means you can cut deeper and far longer than with a non-Teflon® coated blade.

ULTRA LOCK®

WE BELIEVE THIS REVOLUTIONARY LOCKING MECHANISM (PATENT PENDING) IS AS "FOOL PROOF" AS IT GETS AND REPRESENTS A BIG ADVANCEMENT IN SAFETY.

THE WAY THE LOCK WORKS: AS THE KNIFE IS OPENED THE BLADE ROTATES IN A SEMI CIRCULAR MANNER AROUND THE LOCKING PIN VIA A CUT CHANNEL IN THE BLADE TANG. THEN JUST PRIOR TO REACHING THE FULLY OPENED POSITION THE SPRING LOADED LOCKING PIN MOVES FORWARD THROUGH THE ONCOMING STRAIGHT PORTION OF THE TANG CHANNEL UNTIL IT "DEAD ENDS". AT THIS POINT THE BLADE IS RIGIDLY LOCKED OPEN AND CAN'T BUDGE EVEN A FRACTION OF AN INCH AS THE LOCKING PIN IS SURROUNDED BY SOLID STEEL WHICH PREVENTS ANY MOVEMENT OF THE BLADE. IN FACT, THIS LOCKUP IS SO STRONG IT CAN ONLY BE OVERCOME IN TWO MANNERS. THE FIRST IS TO APPLY SO MUCH FORCE TO THE BLADE THAT THE LOCKING PIN SHEARS OFF OR BREAKS THROUGH THE SOLID STEEL BLADE TANG. THE SECOND IS TO MANUALLY RETRACT THE LOCKING PIN FAR ENOUGH THAT IT ESCAPES THE STRAIGHT PART OF THE CHANNEL. ONCE THIS IS DONE, THE CURVE PORTION OF THE CHANNEL CAN ENGAGE IT AND ONCE AGAIN ROTATE AROUND IT AS THE BLADE IS CLOSED.

SCIMITAR®

Our craftsmen have captured the timeless quality of superior cutlery and united it with the finest in modern materials. The result is a dazzling, high impact, leaf-spring folder like no other available.

The Scimitar® blade is hollow ground from super tough AUS 8A stainless steel honed to razor sharpness. Painstakingly designed to facilitate the draw cut, the most effective cutting stroke known to man, the blade also features a needle sharp point which pierces at the slightest touch.

Superior engineering combines traditional appeal with the latest Western technology in the contoured Zytel® and steel frame. Its sleek curves, finger grooves and checkering settle naturally and securely into the hand, maximizing the user's ability to control both the edge and the point.

To provide maximum strength, we have equipped the Scimitar® with a titanium leaf-spring lock. The strength of titanium is peerless in the cutlery industry, and recent tests resulted in the Scimitar® holding 100 pounds without collapsing. This far exceeds the load-bearing ability of our competitors.

ULTIMATE HUNTER®

Have you ever imagined a hunting knife that has the safety and convenience of a folding knife, yet has the strength and cutting power of a fixed blade? Cold Steel® has taken this thought one step further and made it a reality with our Ultimate Hunter®. Cold Steel® President, Lynn C. Thompson, a world-renowned hunter in his own right, and custom knife maker, Lloyd Pendleton, have designed a folder that offers everything you could want in a hunting knife.

The blade, featuring Lloyd's famous drop point configuration, is ideal for field dressing and skinning big game animals and is stout enough to withstand considerable abuse without snapping. It's fashioned from 4 millimeter thick AUS 8A stainless steel and hollow ground to an unbelievably sharp edge that will last and last yet remain easy to re-sharpen. A deep lustrous satin finish highlights the blade's precision grinding and enhances the Ultimate Hunter's® visual appeal.

The state-of-the-art rocker lock is the result of 18 years of hard won technical skill. No one in the industry makes a stronger lock than Cold Steel®. The precision milled, hand fitted parts and extra thick, stiff springs will provide safety under hard use and the special heat treatment, along with other secret refinements, make this lock a formidably strong and reliable piece of workmanship.

The Ultimate Hunter's® most winning feature is its exceptionally comfortable Thermorun® grip. It's specially contoured to fit the palm, absorbing shocks and sticking to one's hand with the kind of traction only Thermorun® can provide. It can be wielded for hours without discomfort or fatigue.

Thumb studs, for one handed opening are included on both sides of the blade and a custom designed pocket clip means your Ultimate Hunter® will be close at hand and ready for your next hunting or outdoor adventure!

SPECIFICATIONS:

Blade: 3 1/2"
Overall: 8 1/2"
Thick: 5/32" (4mm)
Weight: 4.3 oz.
Steel: AUS 8A Stainless
Handle: Thermorun®

LAREDO BOWIE

Awesome is the only adjective that even begins to describe our Laredo Bowie. In fact, it really has to be seen to be appreciated, since mere words just don't do it justice. It features a long, heavy blade made from our exclusive Carbon V® steel. It is expertly heat treated (utilizing seven tempering operations), and flat ground to produce incredible cutting power and perfect balance. And, as an added bonus, it is given an absolutely ferocious cutting edge that terminates in a dagger sharp point.

To further enhance its versatility and efficiency as a weapon it sports a 4 1/2" long sharpened clip point that helps facilitate the deadly back cut as well as a wide variety of more conventional cuts and stabbing attacks.

The rich, Faux Cocobolo handle is as tough as it is beautiful. It is specially contoured to fit the hand like a glove and to provide a positive grip when cutting, chopping or thrusting.

To complement the Laredo's incredibly sharp blade, and superb handle we have arduously forged a unique guard and integral bolster out of a single piece of brass. Both bolster and guard are handsomely detailed and finished with a lustrous mirror polish.

To keep your Laredo Bowie safely at your side and ready for action, we have provided a traditionally styled brown leather scabbard that features heavy stitching, brass rivets, thick leather, and a convenient brass belt peg so you can safely slip the sheath under your belt.

5/16" THICK STEEL

Here you can see Laredo Bowie's massive Carbon V® blade spine and point, shown at actual size.

SPECIAL PROJECTS:
\$19.99

**THE BIRD
& TROUT
COMES WITH A
CONCEALEX® NECK
SHEATH WHICH
INCLUDES A STEEL
BEAD CHAIN
LANYARD.**

BIRD & TROUT

The Bird & Trout Knife is a modern version of a 100-year old classic, treasured by hunters and fishermen for generations. Its enduring popularity is enhanced by its ultra slim profile, and unique, all steel construction.

The skeletonized handle offers great versatility and freedom of movement. It's perfect for working in tight places or making precise cuts. The ring allows the knife to hang from the little finger when not in use and yet remain instantly available.

For safety and handiness, each knife comes with a Concealex® neck sheath which includes a steel bead chain lanyard.

SPECIFICATIONS:

Weight: 0.8oz	Thick: 2.6mm	Blade: 2 1/4"
Handle: 4 1/16"	Steel: AUS 6A	Overall: 6 5/16"
Bead Blast Finish with Concealex™ Neck Sheath		

MASTER HUNTER AND MASTER HUNTER PLUS

Modesty seldom comes into play when we are describing how good our knives are. But in the case of the Master Hunter, we've been unquestionably negligent in that department. So, modesty aside, we want to go on record and say, without a doubt, the Master Hunter is the best hunting knife you can obtain at any price.

Available in VG-1 San Mai III® stainless or in Carbon V® steel, it features a broad blade that's been flat ground to achieve the ideal blade cross-section and edge geometry. Carefully honed to razor sharpness, its edge cuts effortlessly while its dropped point simplifies the chore of field dressing and skinning.

The spine of the blade is a full 3/16" thick to allow for the necessary strength and stiffness to field dress and skin the biggest animals like elk, moose, brown bear, and the African Dangerous Seven.

The grip is specially designed to promote long use without fatigue. Made of the shock absorbent, slightly tacky feeling Kraton®, and featuring our deeply checkered surface, it positively won't slip no matter how wet or bloody your hands get. Plus, Kraton® has specially enduring advantages in that it will never rot, shrink, crack, splinter, or mildew, and is completely impervious to even the harshest weather.

For safety, the Master Hunter comes in a thick, heavy Conceal-Ex™ sheath that will accommodate just about any size belt and allow you to carry it all day without fatigue.

MASTER HUNTER PLUS:

Sharing most of the design features of our Master Hunter, this variation features a guthook. This makes it an extremely useful tool for field dressing and opening body cavities without piercing the entrails.

PENDLETON HUNTER

If you prefer a smaller, more inconspicuous hunting knife, but are reluctant to give up the performance advantages of a larger blade, your search is over.

Our Pendleton Hunter, which was produced in collaboration with custom knife maker, Lloyd Pendleton, has 3 1/2" blade that is so sharp and efficient you'll almost think you're using a larger blade. Lloyd's unique drop point design makes field dressing and skinning chores a snap. The combination of a thick spine for strength, and a deep, wide hollow grind results in a sharp point that's ideal for piercing and the thin, razor sharp edge lasts and lasts yet remains easy to re-sharpen.

The handle of the Pendleton Hunter also reflects Lloyd's genius. Carefully contoured to fit the hand and sporting a modest guard and thumb stop, it facilitates a variety of grip positions. For durability, it's made of shock absorbing, deeply checkered Kraton® which is impervious to the elements and provides an ideal gripping surface even when hands are wet or bloody.

To house the Lloyd Pendleton Hunter's razor sharp blade, it comes

with a superb Secure-Ex® sheath, which, like its handle, is impervious to adverse weather conditions and far more puncture or cut resistant than a leather sheath.

PENDLETON MINI HUNTER

Imagine an awesome hunting knife pared down to the smallest size practicality allows, and you'll have some notion of what the Pendleton Mini Hunter is all about. You might use the rationale that this small, yet handy, knife is incapable of performing big cutting jobs, but you'd be mistaken. We've field tested this little dynamo on three continents to dress and skin a wide range of game from rabbits to animals the size of elk. Made from the same materials and with the same attention to detail as its larger counterpart, it's an indispensable tool for tucking into a fanny pack, ruck-sack, or general survival kit. Housed in its Secure-Ex® sheath, it's ready to serve and light enough to be carried 24 hours a day.

Sisu™

Our company President, Lynn Thompson has long been an admirer of Finland and its people. As a sixth grade student, when he did a report on this tiny, but fiercely independent Scandinavian nation, he discovered the Pukko, the national knife of Finland. Eventually he met and married a Finnish girl from a city in the Michigan Upper Peninsula called Escanaba, and now has a whole clan of Finns to call his own.

A uniquely Finnish characteristic he admires and tries to emulate that of Sisu (pronounced: siss-sue). Philosophically, it can be roughly described in English as...guts, tenacity, steadfastness, courage, and an indomitable will to succeed and survive. He even has a small plaque above his desk with only this simple word printed on it. So, in honor of his beloved wife, her family, and the entire Finnish people, he has revived and updated a classic Pukko originally designed by Tapio Wirkkala, and christened it, appropriately enough, "Sisu".

Because Lynn feels so strongly about this knife, we have spared no expense or labor in its manufacture. The taper ground blade is made from our exclusive VG-1 San Mai III® Stainless steel, and given an exquisite mirror polish finish, and a devastatingly sharp edge.

A blade this handsome requires an equally attractive hilt. To that end, we settled on using deep black linen micarta and set it off by a matching, highly polished nickel silver bolster and pommel.

To complete this superb example of the knife maker's art we have housed the Sisu in a traditionally styled scabbard. Made of thick sturdy leather and equipped with an internal synthetic safety liner it is sure to give years of rugged service.

OUTDOORMAN®

We have had a lot of friends ask us to bring back the Outdoorsman®. So we have dusted off the tooling and made a new run. Only this time, we have added two new improvements. The first is jimping on the blade back. This gives the thumb and index finger more control of the edge as they now have a non-slip platform to rest on. The second is a chopping edge, or bone breaker. In our tests, this edge hacked through everything we put in front of it, including heavy gauge steel wire, so it's sure to stand up in the field! As before, the Outdoorsman® comes with a heavy leather sheath, fitted with a brush proof retaining strap.

TRAIL MASTER®

Why buy a Trail Master®? That's simple. Because it is, without a doubt, the most knife for the money ever commercially built! In terms of sharpness, edge holding and strength, it will out perform—by a wide margin—any factory made knife we know of and 99% of all hand forged knives as well!

We know we're "going out on a limb" with that statement, but since 1987 we have challenged the industry to make a better knife and yet, to this day, we've had no takers. So before you spend your hard earned bucks on one of our competitor's knives, take a moment to review all the advantages offered by the Cold Steel® Trail Master.

STYLE AND CONSTRUCTION

The broad clip point of the blade is extremely resistant to bending or breaking. This is largely due to the fact that the tip is actually thicker near the point than what is seen on our competitor's knives. This, however, does not mean that the point is dull or blunt. On the contrary, the point is almost needle sharp and offers tremendous penetration. Plus, the blade-back is equipped with a slightly concave false edge that measures approximately three and a half inches long.

Every Trail Master's® edge has been honed by hand, then given a high speed buff until it is truly razor sharp and capable of easily shaving the hair off one's arm. This knife is so sharp it will cut at the slightest touch.

The Trail Master® balances approximately 3/4" in front of the guard for a slightly blade-heavy feel that is ideal for delivering heavy chopping and slashing strokes.

The Trail Master's® Kraton® handle is 5" long and deeply checkered for a non-slip, shock absorbing grip. What's more, its contoured cross section helps prevent the knife from shifting or turning in the hand when striking full power blows.

The double guard is very sturdy and rigidly fixed into place. It is long enough to keep fingers off the blade, yet short enough to avoid being tangled in clothing or equipment when the Trail Master® is drawn.

SAN MAI III®

If you want a Bowie knife that requires minimum maintenance and is practically immune to water, salt, air, or the humidity of a jungle environment, the San Mai III® Trail Master® is for you!

This Bowie will outperform any other stainless steel Bowie in the world in terms of strength and toughness. And, as an added bonus, this Trail Master® is equipped with a beautiful rolled edge, capable of easily severing 4" or more of free hanging manila rope!

The San Mai III® Trail Master® comes with a Cordura sheath.

THE KUKRI SERIES

The Greek Kopis and The Roman Machaira were both possible inspirations for the Kukri. These ancient, forward curved blades were known for their tremendous chopping cuts. And now, Cold Steel® takes great pride in being able to offer our versions of these historic blades.

All of our Kukris feature a Carbon V® blade and deeply checkered Kraton® handles for a firm, non-slip grip.

THE LTC AND GURKHA KUKRI EACH COME COMPLETE WITH A RUGGED LEATHER SHEATH.

THE GURKHA KUKRI IS OFFICIALLY ENDORSED BY THE AMERICAN BANDO ASSOCIATION. IT IS MARKED WITH THE ASSOCIATION'S DISTINCTIVE SYMBOL.

GURKHA KUKRI

Taking advantage of its downward curving blade and long, "V" shaped cross section, the Gurkha Kukri places its edge at an angle to a target, creating a powerful shearing effect.

The heaviest Kukri on the market, the blade is almost an inch wider near the tip than it is at the handle, which shifts the knife's balance point forward. This makes it possible for a substantial blow to be struck with minimal effort, using inertia alone to complete the cut.

LTC KUKRI

The curve of our LTC Kukri's blade is very important because no matter what part of the blade makes contact with a target, the edge is always presented at an angle. This creates a shearing motion, so that the edge slices through the target as the weight of the blade drives it deeper. With its thin cross section it will easily cut wood, brush or other soft objects.

COUNTER TAC™

It's been observed that fashion is fleeting. What's "in" now will soon be "out" of style. The knife industry, like any other, is subject to the same winds of political correctness and notions of popular taste. At Cold Steel, we try to stay abreast of the currents of change, but we also recognize that good design never goes out of style. The Cold Steel Tantos, Trail Master, and Voyagers illustrate this point very well.

Our new Counter TAC™ boot knives were designed with this simple philosophy in mind. The full tang blades are made from beautifully polished AUS 8A Stainless steel, that's vacuum heat treated, and sub zero quenched for strength. They are hollow ground and end in a sturdy, but needle sharp point that's ideal for effortless penetration, and of course the edge is razor sharp.

The ergonomic design of the Kraton® grip is comfortable and adaptable to any fighting style, and the deeply textured surface and double guard will insure that the knife is not likely to slip from your hand under any circumstances.

Finally, each Counter TAC™ is shipped with a state of the art Secure-Ex® sheath, complete with a removable boot/belt clip and lashing slots so you can carry or conceal it just about anywhere.

R1 MILITARY CLASSIC

Now you can own an exact replica of this original classic for a very reasonable price. But make no mistake, our R1 Military Classic is not just a showpiece.

The blade is expertly crafted from VG-1 San Mai III® stainless steel and is 3/16" thick. Each one is flawlessly ground, hand fitted, polished and then honed until it will cut at the slightest touch.

For strength and beauty, the double guard has been meticulously fashioned from a single piece of highly rust resistant 300 series stainless steel (instead of brass or nickel silver that can tarnish). It sports an extremely buffed and polished surface that will continue to gleam despite the ravages of time and weather.

The handle is made from solid black linen Micarta. This is extremely costly but nothing else looks or lasts like Micarta! Each one is contoured and shaped until perfect then permanently mated to the heavy blade tang with attractive colored fiber spacers. The final assembly is then buffed and polished to a fine luster.

The R1 is delivered with a heavy duty brown leather sheath complete with Norton Fine India stone and pouch. This rugged sheath is built for hard service and is designed to fit virtually any belt including a G.I. pistol Belt!

BLACK BEAR CLASSIC

This classic sub-hilt design fighter was first developed by Bob Loveless, one of the founding members of the knifemaker's guild. It is perhaps the quintessential combat knife. Its 8" blade offers excellent reach and incredible penetration with very little physical effort. The sub hilt practically eliminates the possibility of the hand being dislodged or coming into contact with the blade. Plus, the sub hilt facilitates rapid and effortless withdrawal after insertion.

Versions of this design are offered by hundreds of custom knife makers at prices ranging from \$450 to several thousand dollars. At Cold Steel®, we thought it was about time to offer premium sub-hilt performance at a more down to earth price, so we designed the Black Bear Classic. We use the same high carbon stainless that is found in our famous Tanto series. The blades are perfectly heat treated and a double grind is expertly applied. Then the surface of the blade is polished to a beautiful satin finish. Finally the twin edges are honed and buffed to hair shaving sharpness!

The black linen Micarta scales are fastened to the blade tang by 6 stainless pins and expertly hand shaped to the perfect contour. Then the handle, including the stainless guard and sub hilt is buffed to a lustrous shine that will rival the finest custom knives!

The Black Bear comes complete with a rugged Secure-Ex™ sheath.

SPECIFICATIONS:

(#14BBCJ) Black Bear Classic

SRK® (SURVIVAL RESCUE KNIFE)

Survival/Rescue operations demand a versatile knife able to withstand the most extreme abuse. The SRK® (Survival Rescue Knife) was designed specifically with this in mind.

The blade is finished with a rich black epoxy powder coat which helps to protect the Carbon V® steel from the elements. It features a tremendously strong clip point that's fine enough for delicate work, yet possesses enough belly for efficient cutting, slashing and skinning strokes as well.

At 3/16 of an inch thick, the Survival Rescue Knife® offers the sturdiest possible point and edge configuration, without sacrificing sharpness. The SRK's® handle sports a single quillion finger guard and a deeply checkered Kraton® grip.

SPECIFICATIONS:

Weight: 8.2 oz. Blade: 6"

RECON TANTO

Over the last 20 years, Cold Steel® has succeeded in establishing the Tanto as a superior combat blade. The value of the Tanto styled reinforced point is now without question. Our superb Japanese Tantos are still unsurpassed for fit and finish, but are expensive, and beyond the financial reach of many knife enthusiasts.

Our Recon Tanto has combined a 7" blade, classic Tanto styling, Carbon V® steel and a comfortable, western-style Kraton® handle into an affordable package.

The Recon Tanto is rapidly redefining the standard for combat knives around the globe. It is well on its way to becoming the preferred fixed blade for SWAT teams and special military units.

Visit your local dealer and ask about the Recon Tanto. Experience the extraordinary quality and test the distinctive razor sharp edge for yourself and you will see why, as a professional, this is a unique knife you can't afford to be without!

UWK™

Original SOG knives from the Vietnam era are extremely rare and replicas can be very costly. In an effort to remedy this situation, we have used modern materials and construction methods to make our own more reasonably priced version.

We call our SOG style knife the UWK.™ It follows the profile of the original very closely. The only modifications that were made (in respect to the original model) were to black epoxy powder coat the surface and to utilize an integral Kraton® handle and guard.

OSS™

The OSS™ sub-hilt fighter offers all the advantages and performance of a custom knife at a fraction of the price. For the ultimate grip the handle, guard, and sub-hilt are injection molded in one integral piece of Kraton.® This manufacturing method makes the OSS™ more affordable while delivering the durability, security, and control in the hand that the sub-hilt fighter is famous for.

ODA™

The ODA™ was designed to be a more affordable version of our popular Military Classic (see page 29). It features a high performance Carbon V® steel blade with a black epoxy powder coat finish and integral guard and handle. The deeply checkered Kraton® handle offers an even better grip than Micarta when your hands are wet, cold or bloody and is equally durable.

Brave Heart™

The highland warriors of Scotland's distant past carried a small yet lethal knife with a distinctively carved wooden handle. It was called the Skean Dhu (which means "Black Knife" in Gaelic, the ancient language of the British Isles). Typically, a kilt clad warrior carried it covertly on his person or wedged in his stocking top.

Cold Steel's latest version of this romantic and historically significant knife is called The Brave Heart.™ Designed by Lynn C. Thompson, it is a small, compact, multi-purpose knife, that will serve admirably as an hunting or utility knife or as an alternative to a double edge boot knife. The thin, needle sharp tip is ideally suited for piercing, and the precision taper ground blade has been honed by hand to razor sharpness. The traditional jimping on the blade spine is both ornamental and functional, providing an aggressive non-slip platform for the thumb or forefinger to bear downward as needed for maximum control.

The compact Kraton® handle is designed to accommodate a wide variety of comfortable and secure grip positions, and its slim, flat cross section insures that it will resist turning or twisting in the hand. Kraton,® is a superior handle material that Cold Steel has employed for decades because its robust traction and resiliency allows it to withstand the shock of even the hardest blows.

The Brave Heart™ comes with a lightweight yet sturdy Secure-Ex® sheath that's been specially designed for an inconspicuous presence. It comes with a detachable boot/belt clip and lashing slots so you can wear or carry it everywhere you go.

SPECIFICATIONS:

Weight:	2.8 oz.	Blade:	4"

Kobun®

In Japan, the martial or underworld meaning of the word Kobun® is "soldier", and that's exactly what we have designed this knife to do; be a good soldier.

The Kobun® has some similarities to our Tanto, but it also has some distinctive qualities that make it more akin to a boot knife. Generally speaking, most boot knives are notorious for paper thin, easily bent or broken points. In contrast, the Kobun's® point is highly resistant to bending or breaking because it is reinforced by the full thickness of the blade's spine which runs almost to the very tip.

The Kobun's® handle offers minimum bulk and maximum grip. It's thin enough to be concealed on one's person, yet easily drawn and confidently wielded. Its cross section was made as thin as possible (approximately 1/2 an inch), then contoured to resist turning or shifting in the hand. And, to insure a non-slip grip, deeply checkered Kraton® was used in the surface construction.

The Kobun's® unique advantages make it just right for your next military mission, police raid, or a "Big City" adventure.

DESPERADO®

The legendary Desperado of the mythic "West"... He was an outlaw. He was an individual with nothing left to lose, and an astonishing reputation to be gained. With some formidable skills with a gun and a knife, he became one fierce opponent, worthy of respect and often, widely feared. We offer a knife that lives up to that reputation and more with the versatile Desperado!

The Desperado® features a 5 inch "S-Curve" clip point blade and an innovative egg shaped handle. It effectively combines the performance sensibilities of a push dagger with the versatility of a conventional boot knife. No matter what portion of the double curved, razor sharp edge makes initial contact, a strong, inward drawing motion will force the remainder of the blade through the target, delivering a deep, massive cut.

Special attention was paid to the knife point. Designed to be sharp, yet thick enough to withstand hard impact and even light prying, the Desperado's® point has strong advantages over other blades that have less pronounced curves. It's ideal for outdoorsmen, military personnel, and those seeking the ultimate in self defense, the Desperado® gives its owner all the advantages.

SPECIFICATIONS:

Blade: 5" Overall: 8 3/4"

STEEL TIGER®

Cold Steel has always contended that the Karambit is a specialized style of knife with unique but limited uses. It is also, however, quite popular. So, in response to the many requests from our customers, and with the help of custom knife maker, Steven Likarich, we proudly introduce the Steel Tiger®, our interpretation of this ancient Indonesian knife.

It possesses all the best features of the classic Karambit and unites them with modern styling and materials, and, best of all; we've kept it very affordable.

The broadly curved AUS 8A stainless blade is beautifully polished, taper ground, and vacuum heat-treated and sub zero quenched, for maximum strength, cutting power and edge retention.

But it's the grip that really distinguishes it from the competition. Designed for comfort, strength and ease of use, it features a tough Grivory® core that encapsulates the tang, emerging as the bolster/thumbshelf and distinctive finger ring. This core is then overmolded with Kraton®, which yields more to hand pressure than Grivory, and, in turn, creates a superb, non-slip grip.

For safety, convenience and quick access, the Steel Tiger® comes with a sturdy Secure-Ex® sheath that you can lash to your gear or retain on your person via the removable boot/belt clip.

SPECIFICATIONS:

Weight: 5.4 oz.
Blade: 5"
Thick: 5mm
Overall: 9 3/4"
Handle: Kraton®/Grivory®
Sheath: Secure-Ex®
Steel: AUS 8A Stainless

SAFE MAKER™ SERIES

Cold Steel has been making push knives for a quarter century. In those twenty five years we have continually been refining our designs, discarding features that didn't perform as well as we would have liked and enhancing those that did. These blades, and the wealth of experience that has gone into their manufacture, have paid off handsomely for Cold Steel as they have generated quite a following among law enforcement and military personnel around the world. This is because they offer "big knife" cutting and piercing potential in a very compact, easily portable size, and, unlike a revolver or semi automatic pistol, they never break, malfunction, or run out of ammunition.

Designed by Lynn C. Thompson, our Safe Maker™ push knives are, without doubt, the finest commercially made push knives in the world. The blade, shaft, and 'T' shaped tang are all drop forged from one piece of AUS 8A Stainless Steel. This process, though costly, eliminates any unwanted sharp edges or surfaces that would irritate the hand or fingers when the knife is clasped in a closed fist, and it produces a better knife, since the subsequent vacuum heat treatment and sub zero quench, renders the blades virtually unbreakable.

Well made blades deserve equally well-made grips. A lot of time and energy went into the production of our 'T' shaped handles. Made of shock absorbing Kraton® they totally encapsulate the tang and part of the shaft so they can be comfortably and securely grasped in the fist with the blade jutting out between the fingers and used to deliver absolutely devastating punching and slashing blows.

The Safe Maker knives are available in two sizes; each includes an easily concealable and sturdy Secure-Ex® boot/belt sheath. The smaller version includes a steel bead chain lanyard so it can be worn as a neck knife.

SPECIFICATIONS:

Safe Maker I™	Safe Maker II™

URBAN DART™

The Urban Dart™ is our rendition of a similar knife the late Bob Enghat designed over twenty years ago. With elegantly simple lines and an economy of purpose, the Urban Dart™ is reminiscent of our Spike® series but with a few differences.

The blade represents a huge advance for Cold Steel in knife making technology. We have spent literally years trying to find a way to satisfactorily manufacture this type of blade. Ultimately our factory in Japan developed a method to drop forge successfully the triangular cross section this knife required. With the addition of precision hollow grinding, superlative polishing, and highly skilled hand sharpening, we were able to produce at last this lethally wicked blade.

The simple teardrop shaped Kraton® handle is small and thin. It gives extra traction to the fingers and protects the palm when the knife is used like a push knife or when using palm reinforced grip styles.

The Urban Dart™ comes with a Secure-Ex® sheath and steel bead lanyard chain so it can be easily worn as a neck knife or be tucked, taped, or lashed just about anywhere.

BARRY DAWSON

THE SPIKE® SERIES

The Spike®, which was designed by custom knife maker, Barry Dawson, is a weapon pared down to its most basic elements. This seemingly simple knife features a thick, yet narrow blade which is distal tapered and flat ground down to a zero edge. This creates a unique cross section that facilitates both penetration of the tip and a cutting power previously unknown in such a thick, narrow blade.

The integral handle of The Spike® compliments its simple, minimalist qualities. It has been carefully shaped out of solid steel, then wrapped with black cord. All of the hard-corner edges on the grip have been softened or "melted" to be more rounded so their contours won't irritate one's hand. Each spike comes with a sturdy Secure-Ex® sheath and steel bead lanyard so you can wear it around your neck or lash it to a "D" ring, fanny pack, or other gear.

SPECIFICATIONS: The Spike® Series

Blade: 4" Overall: 8"
Thick: 7/32" (5.75mm)
Weight: 2.5 oz. to 2.6 oz.

TAI PAN®

Like its serpent namesake, the Tai Pan® is aggressively fast and deadly. Designed by Lynn C. Thompson in the distinctive "Tanto" style, the Tai Pan® embodies all the best features of a classic dagger while minimizing its shortcomings.

Most daggers are notorious for having thin, fragile points that are easily broken. In contrast, the Tai Pan® features a sturdy spear point which is wide and thick enough to resist breaking without compromising its ability to offer deep, effortless penetration.

The razor sharp twin edges offer twice the potential cuts, slashes, and locks of a single edge knife. When used with skill, the Tai Pan® can cut a 180° arc up or down or from side to side with devastating effect. With a balance point just behind the guard, the Tai Pan® has subtle "handle heavy" feel making it ideal for insertions yet remaining "lively" in the hand.

As with the Tanto, the Tai Pan® features a tapered black Kraton® handle with a unique flattened oval cross section. Over time, this material and handle shape have proven ideal for preventing the knife from shifting or turning in the hand even under the worst circumstances.

Meticulously fashioned from 300 series stainless steel, the traditional style tsuba and holster offer both added safety and beauty. The Tai Pan's® butt terminates in a tapered, semi-pointed pommel to maximize the effect of even the slightest blow.

THE TANTO SERIES

There isn't a person working in the knife industry today that knows more about the Tanto than Cold Steel does. It was, after all, Cold Steel who invented and popularized this knife style in the early 1980's. We have spent well over a million dollars persuading the public, both through advertising and live or videotaped demonstrations, of the Tanto's many advantages. We have been producing Tanto's for more than 25 years now, and there is still no factory or custom knife maker around making a Tanto that can approach the cutting, slashing or piercing power of one that is manufactured by Cold Steel.

All of our Tantos feature a deep lustrous satin finish on the hollow ground blade bevels and a contrasting line grain finish on the blade flats. This technique highlights our state of the art grinding methods and emphasizes the Cold Steel Tanto's unique appearance. In addition, the Tanto's come with our famous flattened oval Kraton® handle. The oval shape provides a solid grip and resists rolling or twisting in the hand under hard use, the kind that, over time, would destroy a lesser knife. The use of Kraton® in knife handles is another Cold Steel innovation. Kraton® is an unparalleled space age material that won't crack or rot and is immune to the ravages of bad weather.

The tapered, solid steel pommel is another important Tanto feature that should not be ignored. Lynn Thompson designed it to concentrate the full force of a crushing blow in a small area so that even a moderately powerful blow can be remarkably effective in disarming or otherwise incapacitating an attacker.

The knives in the Tanto Series all come with a thick, high quality black leather sheath that is sure to give years of hard service and keep your Tanto at your side, ready for action.

TANTO & MASTER TANTO: Available in AUS 8A Stainless (Tanto), or in San Mai III® (Master Tanto), this knife features a six inch blade with a re-styled guard for increased finger protection.

MAGNUM TANTO II: Two ounces heavier than the Tanto, which provides a thirty percent increase in cutting power. Combine that with the visual impact of a tsuba-style (sword) guard and you have perhaps the ideal Tanto. The Magnum Tanto II's blade is made from San Mai III®.

MAGNUM TANTO IX & XII: These were created in response to popular demand for a longer Tanto. They are available in 9 inch and 12 inch blade lengths in our exclusive San Mai III® laminated steel.

OPTIONAL CONCEALEX SHEATH

(FOR TANTO AND MASTER TANTO ONLY)

Now you can carry your Tanto in our "jump" approved Concealex™ sheath. Everything about this sheath is rugged, fast, and versatile. Each sheath comes with two attachment systems. One is ballistic nylon for G.I. web belts and the other is made of durable plastic to facilitate "inside the waistband" carry.

BUD NEALY

KONJO™

Konjo is a Japanese term that, in the American vernacular, would roughly translate as "Guts". It suggests courage under adversity, intestinal fortitude, and a dogged tenacity in the face of physical hardship, pain or even danger. This is an admirable quality in anyone, and it makes an admirable name for these new Japanese styled knives.

Inspired by custom knife maker, Bud Nealy's work in the late 1980's, these knives are available in two different blade styles, with either a reinforced Tanto point style (first popularized by Cold Steel®), or with a "long sword point" that's particularly well suited for slashing. Both are precision ground out of VG-1 San Mai III® steel and vacuum heat-treated and sub zero quenched for maximum strength, toughness, and edge retention. They are ground to a thin edge before being honed to razor sharpness, and they have an attractive mirror polish and come with a traditional ridge shaped Muné (spine of the blade) and double fullers.

HERE ARE SOME ADDITIONAL FEATURES:

TAPERED TANG: Both knives include a perforated tapered tang. This feature, though costly, dramatically improves the knife's balance and reduces its overall weight without sacrificing strength where it's most needed.

BOLSTER: Bolsters serve to strengthen the handle and prevent it from cracking or splitting under stress. The Konjo's™ are equipped with highly polished nickel silver bolsters designed to emulate the Habaki (blade collar) on a Japanese sword.

HANDLE: The grip scales are made of highly polished black linen micarta. These have been hand fitted and permanently attached to the tang by epoxy and custom "star" bolts.

SHEATH: The Konjos™ come complete with a sturdy, rich looking sheath that compliments their custom look and performance.

THE DRAGONFLY SERIES

The classic Japanese battle sword in all its incarnations has been celebrated for centuries, not only for its elegant lines and simple beauty, but also for the technique and skill that went into its construction.

Most swords offered today are interpretive copies of antiquities from feudal Japan. They were made for warrior's of small stature who seldom rose above five and a half feet. As skillfully designed as these swords are, they may not be perfectly suited for the twenty first century warrior, who benefited from contemporary advances in childhood nutrition and healthcare and grew up to be a substantially taller, stronger, and more athletic version of his historical counterpart.

As a way of compensating for this size disparity, Cold Steel has created the Dragonfly Series. These swords feature thicker, wider and heavier blades, which mirror our Imperial Series in respect to heat treatment, polish, quality of furnishings, and attention to detail, but with a few new departures.

Most noticeable are the distinctive teal-green silk cord-wrap and black samé (ray skin) used on the handles and the black iron furniture that bears the dragonfly motif. Also, the polished blades are more strongly curved than our Imperial blades and terminate in a long "iris leaf" point for maximum cutting and slashing potential. Additionally, these swords come with two protective bags. There is a blue cotton travel bag and an intricately decorative display bag that's made from the finest heavy silk metallic brocade.

IMPERIAL SERIES JAPANESE STYLED SWORDS

Our factory has used only traditional materials for our Japanese sword's fittings. The Tsuba (guard), Fuchi (collar), and Kashira (pommel), are expertly made and finely crafted from black iron.

The Habaki (blade collar) is hand made out of polished brass and each hilt is covered in Samé (ray skin) and tightly wrapped in the traditional style with black silk cord. A beautiful brass Menuki (a small ornamental sculpture inserted between the ray skin and the cord wrappings on

the handle) enhances the sword's aesthetic appearance and makes for a sword that is as traditional looking as we can possibly make it.

All feature fully sharpened 1050 carbon steel blades, each heat treated to a spring temper. The blade surface is then given a careful polish by hand, with a distinctive mirror polish applied to the fuller (blood groove).

These battle-ready swords are exquisite examples of the swordmaker's art.

WARRIOR SERIES JAPANESE STYLED SWORDS

The Japanese swords of the Imperial Series have proven, since their initial introduction almost two years ago, to be quite popular with many of our customers. Still, we are aware that there are some people who want a battle ready sword but hope to find one at a more affordable price. Our new Warrior Series addresses this problem directly. In our efforts to reduce the costliness of the blades, we have omitted the expensive mirror polishing that we used on the Imperial swords to create a new series of Japanese swords with a more practical finish.

The Warrior Series swords are very handsome in their own right and share the same steel, heat treatment, and sharpness as their more expensive Imperial counterparts. Like the Imperial swords, they have Samé covered, cord wrapped handles and quality fittings. If you're in the market for a strong, good looking, reasonably priced Japanese sword we know you'll be happy to own one of these.

FROM OUR MAILBOX...

My name is Kyle Sherman and I'm sending you this e-mail based on the field performance I observed from one of your products. Just a little background on myself, I have been a police officer for the past 13 years. In those 13 years, I have always carried a folding knife for duty purposes. I consider a knife a tool of my trade. I have carried various different reputable manufacturers' products. Over the past 6 or 7 years, I have carried a Cold Steel Tanto blade of some sort. Approximately 3 years ago, I purchased a Recon 1 Tactical folder with a Tanto blade. I knew this was a great knife, but I never knew how much until I was placed in the following situation.

I was working security off-duty at a large movie theatre when I heard the fire alarm of the theatre had been activated along with the sprinkler system. I immediately could smell smoke coming from one of the many entry/exit areas of the theatre. I managed to open a hallway door down the hall from where the smoke was coming from. The smoke I was seeing was black and thick. The main concern I had was the smoke was coming from an area in the immediate vicinity of a theatre entrance. I did not know if there were people trapped in the theatre or not, or if anyone was inside the theatre suffering from smoke inhalation or other medical problems from the fire. I knew I needed to get to right next to where the theatre entrance was. To get to the door, I tried to get through the smoke from the interior of the theatre to access the door. I could not get through because the smoke was too thick. When I entered the smoke, I could not breathe or see where I was going. After numerous attempts failed, I had to retreat. I decided to try to open the door from the outside of the theater.

When I got to the outside door, in my excitement I had forgot the door only opened from the inside. I needed a crowbar or similar tool to pry the door open from the outside. I was just getting ready to go get a pry bar from my car when I remembered I had my Cold Steel Recon 1 in my pocket like I always did. Thinking the blade might be damaged or break off in the process, I was leery of using my beloved knife as a pry bar. But, I was even more concerned about someone being trapped by the smoke and fire in the theatre. I opened my Cold Steel Recon 1 blade and slipped it into the slot between the doors and began applying pressure. I thought the blade would snap off. I began to pry with the blade of the knife. The blade was bending while I was pulling on the handle. After a few hard tugs the doors were pried open. I could not believe it worked. The only damage to my knife was scratches on the exterior finish of the sides and the tip of the blade. Talk about a durable product. Long story short, the smoke cleared out of the theatre relatively quickly, and there were no people trapped in the theatre.

Anyone who carries a Cold Steel product has seen your controlled tests. I just wanted to tell you, and whoever else might be interested, about an unscheduled field test that my Recon 1 passed with flying colors. I still carry the same knife I did that day. Thank you for making a quality, trusted product.

— K. Sherman, Norman, OK

I have been carrying a Large 5" Tanto Point Voyager for over 5 years. I am a biker and I ride my Harley to work any day it's not raining. My friends and I were traveling down 1-9 on our way into the office when my knife slipped out of my pocket. My friend saw it as it hit the concrete pavement and bounced. A tractor-trailer rig then ran over it and threw it a couple of feet into the air. He stopped and went back for it and brought it to me at the office. The knife has a very minor scuff mark on one corner where it landed, other than that it's fine. I knew these knives were tough before, but even this amazed me. You guys have a great product.

— K. Langley, Rocky Mount, NC

I am writing to tell you how very pleased I am with my Cold Steel Voyager folding knife. I have had this knife for 3 years or so and carry it all the time I'm not at the office. I am almost ashamed to say that I abuse the hell out of this knife but I bought it to earn its keep and if it can't, I don't want it. This knife has taken all I've dished out without fail. I dig weeds, cut small limbs, dig out rocks, and anything else that I can think of. We recently moved to a new home that was built in 1978. The previous owners are on in years and neglected the landscaping leaving us weeds, Mulberry trees, and grass all over the place. They had put down gravel, which had really melded into a very hard mess to the point that I had to use my pick to loosen the gravel before we could even think about getting rid of all the "bad stuff". Many times I used my Voyager to dig out the unwanted when I had a hard time getting the shovel to go in. The Voyager and I dug out Mulberry trees with 2 1/2 foot taproots! The knife has taken so much abuse the last 3 months that I had to touch up the edge with a fine mill this morning before I could make any headway on my diamond stone. After about 30 minutes work, the edge is great. Yeah, yeah, I know if I wouldn't let it go so long it wouldn't take so long to get the edge back. Hey, I've been busy! Now for a drop of oil on the hinge and I'm good to go again. This has been a bit long but suffice to say, you folks make one great knife! I carry a Spyderco at work and have for many years. Given what I've seen with the Voyager, my next knife will be a Cold Steel. Thanks!!

— B. Rogers, Highland, IL

Where do I begin? I have a Gurkha Kukri that I use every day of my life in one capacity or another. Having said that let me tell you a little about the activities I engage in. By trade I am logger/"land clearer" (for lack of a better term). I am also a survival instructor lending my skills to children's groups in my area. Every chance I get I'm in the mountains. I have owned and used nearly every type of knife available to mankind, not one of them can hold a candle to a Cold Steel knife. My Cold Steel Kukri is bar none the most rugged, dependable tool/weapon a man could ever hope to have. I will bet my life on the quality; in fact I do every single day. After getting my beloved blade I soon came to the conclusion that Cold Steel is the only way to fly. My blade has been used to hammer, pry, split, dig and chop day after day and it has never failed me. I have never seen a knife that could even come close to withstanding the misuse and abuse (normal field use) that I have put this blade through. By the way, it also throws perfectly. If all my other tools performed as well I'd be set for life. I could go on for days but I'm sure you already know that you have achieved knife nirvana. Thank you a thousand times for offering such a quality product worth every dime and then some.

— D. Kay, Blairsville, GA

Lynn, I have used your products for years. I have lived on Kodiak, off and on, since 1969. Your knives, especially the carbon steel ones, are top quality and first rate. The steel is great and the rubber handles perfect. Your prices are reasonable. I am user, not a collector. Within reason, I do not care much about looks, I care about comfort and performance. The fixed handled knives you produce are the finest in the world for the rank and file man who straps on a knife and uses the hell out of it. I use mine on wood and meat, and find the edge-holding ability superb. I like my knives small and light, and really appreciate their ability to cut.

One small comment about the Assegai used in your video – you radically underplayed its lethality and ability to cut. When you quickly waved it back and forth through that piece of hanging meat it was only then that we could truly see how effective it was at slicing molecules apart. You should have done a little more of that with the Assegai when you shot the video.

— M. White, Sound Tech Silencers

SCOTTISH DIRK

The Scottish Dirk that most knife enthusiasts are familiar with these days is, more or less, a piece of rubbish—a prop—a costume accessory for stage and screen. It's declined into a "knife like object" that people hang above their mantles or on the walls of dimly lit, wood-paneled dens.

Our version is a modern replica that harkens back to an earlier form, when the dirk was a functioning tool and weapon. The 13" blade is forged to a hard spring temper from 1050 high carbon steel. It's 1 1/2" wide and comes fully sharpened and battle-ready, prepared to hew down any foe.

The attractive Rosewood handle is capped with a contrasting blued-steel guard, bolster and disc-shaped pommel, and an handsome leather scabbard completes the package. The scabbard features an extra wide belt loop with a blued-steel throat and chape. This is the perfect companion piece to complete your Highland ensemble, a real fighting dirk, instead of a useless piece of metal.

SPECIFICATIONS:

Weight: 18.9 oz.
Thick: 1/4"
Blade: 13"
Steel: 1050 High Carbon
Overall: 18 3/8"
Scabbard: Leather w/ Blued Steel Fittings

SCOTTISH BROADSWORD

The traditional weapon of the highland clansman, this sword has sown fear into the hearts of Englishmen for centuries. Its long, two-edged blade and distinctive basket hilt, when combined with targe and dirk has proven to be more than a match for enemy soldiers on battlefields the world over.

Now Cold Steel® has chosen to make our own replica of this famous weapon. Our double-edged blade is hand forged and beautifully polished with triple fullers. The stout basket hilt is made of blued steel with a wood grip covered in samé (ray skin) and decoratively wrapped in wire. Each broadsword will pass the stringent British Proof test and comes with a wood and leather scabbard that's complimented by blued steel chape and throat.

SPECIFICATIONS:

Weight: 47.8 oz.
Thick: 7/32"
Blade: 31 1/2"
Overall: 37 3/4"
Steel: 1050 High Carbon
Scabbard: Leather/wood w/ Blued Steel Fittings

HORSEMAN'S BASKET HILT BROADSWORD

Whether you're fighting from a saddle or on foot, we sure you'll be hard pressed to find a better weapon for the job than our Horseman's Basket Hilt Broadsword. Loosely modeled on English Broadswords of the 17th and 18th centuries, it has a long double edge blade that can deliver powerful shearing cuts well as a deadly thrusting attack.

The handle is made of wood wrapped in Samé, or ray skin, and bound with wire for an exceptional grip. And, to completely protect one's hand it comes with a full basket hilt that's been enlarged to accept an American sized hand. There's a heavy steel pommel that counter balances the blade and serves as a lethal striking tool in its own right. Plus, because the blade is made from modern high carbon spring steel, it will pass the British Proof Test. It comes complete with a heavy leather scabbard that's reinforced by a steel throat and chape.

VIKING SWORD

The typical Viking sword of the 9th and 10th centuries featured a long wide blade with a broad central fuller and two keen edges. The preferred stroke was a hard slash or chopping blow, so the point was fairly rounded but was just acute enough to be useful for thrusting. A simple guard with forward curving quillions was often utilized and combined with an equally utilitarian wooden handle that was covered with leather, bone, or even cast in brass.

What really made the Viking Sword so distinctively recognizable from its contemporaries was its heavy 5 lobed pommel used to balance the long blade.

Our sword has features in common with its historical counterpart. It has a double edged blade, hand forged out of high carbon steel and then polished to a brilliant lustre. The wooden handle is covered in leather and is supported by a simple, elegant guard at one end and an equally handsome 5 lobed pommel at the other. Both guard and pommel feature traditional Celtic knot embellishments.

To house the keen double edge blade each of our swords is supplied with a wood scabbard covered in black leather and reinforced with a highly polished steel chape and throat.

SPECIFICATIONS:

Overall: 36 7/8"
Blade: 30 1/4"
Thick: 15/64"
Weight: 37.1 oz.
Steel: 1050 High Carbon

TWO HANDED GREAT SWORD

Our Two Handed Great Sword is the biggest sword we make. But don't let its size fool you, as there is nothing awkward or clumsy about this awesome sword. Sure it's big and meant to be carried over the shoulder instead of in a scabbard, but it's extremely well balanced and easily wielded by people of larger stature and physical strength.

To protect the hands from opposing weapons, it features a large guard with side rings plus integral parrying hooks that allow the blade to be shortened for close range slashing and stabbing attacks.

The handle is made of wood and covered with leather and is extra long to afford a full two handed grip. What's more, it's capped by a heavy steel pommel that helps counter balance its long blade and serves as an effective weapon in its own right.

The Two Handed Great Sword is sturdy, strong and battle ready. If you're looking for the ultimate in big performance oriented swords, your search is over.

SPECIFICATIONS:

Overall: 55 1/4"
Blade: 39 7/8"
Thick: 7/32"
Weight: 6lbs. 13.5 oz.
Steel: 1050 High Carbon

HAND-AND-A-HALF SWORD

We would be hard pressed to think of a more versatile or effective sword than the "Bastard" or "Hand-and-a-Half Sword" we offer here. For a sword of this size, it's amazingly light and fast and tips the scales at approximately 3 lbs. Its 33 1/2" long blade is quite wide so it can produce deep shearing type cuts yet pointed enough to be effective in a thrusting attack. Its long handle is suitable for both a one or two handed grip and is fashioned out of wood covered in black leather. To balance the long blade we have capped the butt with a beautiful "scent stopper" pommel which can be a lethal weapon in its own right.

Every Hand-and-a-Half Sword reflects the highest standards in workmanship and materials and comes fully sharpened and ready for battle! To safely house the blade we have also included a very attractive scabbard made of wood covered with black leather and steel throat and chape.

SPECIFICATIONS:

Overall: 42 5/8"
Blade: 33 1/2"
Thick: 1/5"
Weight: 49 oz.
Steel: 1050 High Carbon

GROSSE MESSER

Known throughout Germany as the "Big Knife", the Grosse Messer hails from central and northern Europe where, in far off days of old, noblemen and peasants alike relied on it to protect hearth and home from the ravages of brigands, cut throats, outlaws and other assorted characters of ill repute.

Due to its stout, wide blade and generously sized handle, it could be wielded in one or both hands and was capable of shearing through chain mail or cutting a man in half with a single strike.

Our version of this elegantly simple yet remarkably effective weapon sports a hand forged blade of 1050 high carbon steel that's so sharp we have used it to split a telephone book in half, with a single blow!

The guard and heavy pommel are made from blued steel and feature rosewood handle scales riveted to the sword's full tang.

For convenience and safety, the Grosse Messer comes with a strong, handsome scabbard crafted from wood and covered in black leather. It is reinforced with a steel chape and throat that has been blued to match the guard and pommel.

SPECIFICATIONS:

Overall: 42 1/4"
Blade: 32"
Thick: 1/5"
Weight: 4 lbs.
Steel: 1050 High Carbon

BUTTERFLY SWORDS

Prior to World War II, the Butterfly Sword was virtually unknown outside of southern China. This changed at the close of the 1940's, when the Communists took control of mainland China, forcing many Kung Fu masters to flee the oppressive regime and establish new schools elsewhere. Currently, due to the spread of Kung Fu, these once obscure swords have become quite popular.

Typically, Butterfly Swords come in pairs that are cleverly nested together so they appear to be one sword not two. When they are drawn, they can be quickly separated and wielded in both hands to make wickedly effective chops, slashes and thrusts.

Our battle worthy blades are 15" long and 2 5/8" wide. The handsome slip-proof grip features carefully selected hardwood covered with attractively braided cord. The "D" shaped guard has a long forward quillion, so it can both deflect and trap various opposing weapons.

GIM SWORD

There are two basic types of straight bladed swords used in China. One is fairly long and heavy known as the Wu Jian or "Martial Sword". The other is substantially lighter and called a Wen Jian or "Scholar's Sword" and was primarily carried for personal self defense.

After studying books and video tapes on the history and use of both weapons, we have decided to make our own battle worthy Gim (Wu Jian) for serious collectors and practitioners of Chinese Martial Arts.

The traditionally styled guard and pommel are cast out of thick sturdy brass and fit snugly on a stout Rosewood handle that is both highly decorative as well as functional.

The Gim Sword comes with an excellent wood scabbard with brass throat, chape and sword rings and can be worn suspended from the belt or slung over the shoulder.

CHINESE WAR SWORD

There are few swords in the world that are more intimidating or more effective than the two handed Chinese War Sword. For centuries it has been wielded by both peasants and soldiers alike with devastating results. Its huge wide blade will shear through armor as if it were butter, not to mention mere flesh and bone. There is nothing clumsy or awkward about this sword. Its 14 1/2" cord wrapped grip, "S" shaped guard, and steel ring shaped pommel all work in concert to make it a well balanced weapon that's unbelievably fast and agile.

Each Chinese War Sword comes fully sharpened and is protected by a stunning, heavy leather scabbard of exceptional workmanship. Order your sword with confidence as we are convinced you will be more than delighted with the sword's fit, finish, materials, and above all, performance!

WILLOW LEAF SWORD

This is the classic Chinese broadsword used by soldiers and civilians alike from ancient times right up through the 1940's. Its broad, heavy blade is distal tapered to aid balance and perfectly shaped for all cutting, slashing, and chopping strokes. For ease of handling, it comes with a 7" long cord wrapped handle (one and a half hands in length) as well as a brass guard and pommel.

BAGUA

A substantially larger version of our Willow Leaf Sword, the Bagua, or two handed saber, was a ferocious weapon on the battle field and a valuable training tool in the practice hall. Its blade, at 31" is significantly longer than its smaller brother and proportionally wider and thicker as well. This increase in size, when combined with a full two handed grip, give this saber enormous cutting and slashing power on the battle field and helped promote strength and agility as a man skilled in the use of the Bagua was an even more fearsome opponent when armed with a lighter and more agile weapon.

NAVAL DIRK

During the golden age of sail, the Naval Dirk was a common sight in port town streets or on the windswept quarterdecks of a British Man of War. Worn daily by young mid-shipmen and officers alike, it was often beautifully made and richly decorated. It was never simply a fashion accessory though; it was a very dangerous and lethal weapon. At sea, it made for a very effective slashing or stabbing tool that could be used independently or in combination with a cutlass, sword or saber.

Our interpretation of this classic shipboard weapon features a sixteen and a half inch, double edged, 1050 high carbon steel blade with a wide fuller and a thick spine for strength. To protect one's fingers and to serve as an aid in parrying, it comes with a generous solid brass cross guard.

The traditionally styled polished black horn grip is attractively ornamented with a brass pommel and matching spacers. Handsomely crafted and ready for battle, the Cold Steel® Naval Dirk comes complete with a wood lined leather scabbard.

The scabbard includes a decorative brass throat and chape as well as a carrying ring.

SPECIFICATIONS:

Weight: 16.4 oz.
Thick: 1/4"
Blade: 16 1/2"
Steel: 1050 High Carbon
Overall: 21 7/8"

MORO BARONG

The Barong is one of the classic short swords used by the Filipino warriors who prized it for its ability to sever an arm or leg with a single blow! While widely known throughout south east Asia, it is particularly popular to this day with the Moros of Sulu, Mindanao, and North Borneo.

Barongs feature distinctive leaf shaped blades that are quite heavy. They have no guard, and often come with elaborate handles which anchor the heavy sword in the hand and help to resist centrifugal forces when making a hard chopping or slashing stroke.

Since many of us at Cold Steel® are active practitioners of the Filipino Martial Arts, we have a great affinity for the Barong and have tried to interpret it as accurately as possible.

The mirror polished blade is approximately 18" long by 2 3/4" wide and 3/16" thick at the spine. For maximum strength and effectiveness in battle, it is forged from 1050 high carbon spring tempered steel and distal tapered to assure perfect balance. Each blade comes fully sharpened and ready to cleave both flesh and bone.

The classically shaped, down-turned handle is made from exotic Rosewood, specially

selected to match the scabbard in both grain and color.

SPECIFICATIONS:

Blade: 18"
Overall: 25"
Thick: 3/16"
Weight: 30.1oz.

SMALL SWORD

The advantage of the sword point over the edge became evident by the end of the 16th century. The Rapier, with its long elegantly thin profile, which emphasized its point, became the popular choice in civilian self-defense. It was, however, an unwieldy weapon, especially when it was used in narrow, crowded streets and alleyways. Eventually, by the end of the 17th century, a more sophisticated, shorter and lighter version of the Rapier emerged, the Small Sword.

Its primary advantage was its stiff, lightweight blade which was forged in a triangular cross section. The hilt (compared to the Rapier's) was simple and smartly functional, consisting of no more than an elliptical plate, or two shells and a knuckle guard.

Our version duplicates the original model's best features, but uses modern materials like 1050 high carbon steel, heat treated to a tough spring temper.

The hilt features two shells with functional finger loops and a light, but strong, knuckle guard.

The Small Sword comes with an attractive leather scabbard that features an intricately decorated throat and chape.

SPECIFICATIONS:

Weight: 22.6 oz.

1917 CUTLASS

In 1917, the U.S. Navy decided to replace its Model 1860 cutlass which had been in continuous service for 57 years, with a new model. Cold Steel's® modern recreation of this classic fighting sword is as authentic as possible, it is virtually an exact copy of an original in the personal collection of Cold Steel President, Lynn C. Thompson. Our 1917 Cutlass features the signature 25" curved blade and a half basket guard that's stamped out of heavy 18-gauge high carbon steel, and both the blade and guard are blued to resist rusting. The handle is made from carefully shaped hardwood, painted brown and secured to the tang by three heavy brass cutler's rivets.

The scabbard is an accurate reproduction of the original and is made of high quality leather and features brass and copper fixtures. It can be worn comfortably at the side on a pistol belt without chafing its owner.

SPECIFICATIONS:

Overall: 29 5/8"
Blade: 25"

1796 LIGHT CAVALRY SABER

This saber was widely used by the British and their Prussian allies under General Blucher in the Battle of Waterloo. The blade's profile was derived from the ferocious Indian Talwar and was reviled by the French who strongly protested its use due to the horribly destructive wounds it inflicted. In fact, this saber was so successful as a cutting weapon that the German Cavalry continued to use it right up to the beginning of the Twentieth century!

If you want a combat quality saber that will pass the British Proof Test and is fully capable of shearing off arms and even legs with a single blow, this is a must have! It comes fully sharpened with your choice of a wood and leather scabbard with steel mounts and fittings, or an all metal scabbard.

SPECIFICATIONS:

Blade: 33"
Overall: 37 3/4"
Weight: 34.2 oz.

1830 NAPOLEON SABER

Napoleon's cavalry was the bane of the European battlefield. While his horses were second string, his swords were absolutely first rate. They were manufactured in a state of the art factory dedicated to producing the finest edged weapons of the day.

The medium weight saber we are offering here possesses excellent cutting and slashing capabilities yet still remains useful for a thrust.

In appearance, it very closely resembles the U.S. 1860 Light Cavalry Saber, but in actuality is a far more effective and durable weapon. The moderately curved blade is forged out of 1050 Carbon Steel and features a long, wide fuller and a very sharp, practical point.

The grip is equally well made. It's wrapped in black leather and strongly protected by a stout, brass three bar hilt. The whole package comes with a heavy duty polished steel scabbard with dual rings so it can be easily attached to your baldric or sword belt.

SPECIFICATIONS:

Blade: 33 3/4"
Overall: 39"
Weight: 37.7 oz.

U.S. 1860 HEAVY CAVALRY SABER

At the outbreak of the American Civil War, there were two types of sabers issued to the Federal Cavalry: "light" and "heavy". The light version was popular, but the heavy model, dubbed the "Old Wrist Breaker" was the one worth owning, as it was a superior weapon. Its 36" blade offered big reach advantages over most sabers, and its substantial weight gave it the leverage to easily crush bones and sever limbs or even a head with a single blow. The brass guard had three bars to protect the hand and the grip was wire bound leather and capped with a sturdy pommel. In its double ringed, steel scabbard, it could be easily attached to a saddle or to a belt.

After examining and handling a number of original 1860 Heavy Cavalry Sabers, we decided to make our own reproduction with a few improvements. Our blade is made from 1050 high carbon steel with a hard spring temper and will pass the British Proof Test.

SPECIFICATIONS:

Overall: 41 1/2" Blade: 36"
Thick: 1/3" Weight: 42.9 oz.

1908 INDIAN CAVALRY SABER

NEW

What makes an ideal a cavalry saber? To impale your enemies in the charge, you need a narrow stiff blade with a sharp point. In the mêlée, on an immobile horse, you need a wide, curved, semi flexible blade for cutting and slashing. The British set up a committee to study this quandary and, in 1908, settled on a saber whose long suit was the thrust. It had a narrow, 35" long blade, a thick cross section and a sharp point. It had an excellent bowl shaped hand guard and a grip that automatically brought the point "in line" for the perfect thrust. It was easy to carry too, as its scabbard had two rings for suspending it from one's belt or attaching it to a saddle. Eventually adopted by the Indian Army, it's still issued today as the 1908 Indian Army Cavalry Saber.

The president of Cold Steel has become quite fond of this saber after fencing extensively with it and we are now proud to offer our interpretation of this fantastic weapon. It replicates the original lines with only a slightly lighter gauge steel for the bowl guard (for improved balance), and a more durable plastic grip. In our tests this saber has proven ideal for ground combat as well as on the saddle, and, when well sharpened, can deliver a frightfully effective cut as well.

SPECIFICATIONS:

Overall: 42" Blade: 35"
Thick: 8.5mm Weight: 40.7oz.

SHAMSHIR

The Shamshir originated in Persia and spread throughout the former Ottoman Empire and beyond into India and even the Philippines. Its strongly curved blade was enduringly popular and absolutely ideal for delivering a devastating cutting stroke. And, contrary to popular belief, it was very effective at delivering rising, descending and hooking style thrusts!

Typically, the curved Shamshir blade had a narrow cross section and a sharp point. It had a simple brass or steel crossbar hilt and an equally straightforward handle made from wood or animal horn that terminated in a distinctively bulbous pommel. This pommel was offset slightly to help the hand resist centrifugal force when making a hard cutting stroke.

Our version of this historic saber replicates the original as closely as possible.

The only modifications were to substitute a modern high carbon steel for the blade and to use black faux buffalo horn for the handle. Even the scabbard is a close copy of the original. It's made of thick, black leather (so it won't dull the blade) and reinforced by a brass throat and chape, and comes complete with dual suspension rings.

SPECIFICATIONS:

Overall: 36 1/4" Blade: 30 1/2" Thick: 3/16"
Weight: 30.1oz. Steel: 1050 High Carbon

FIGHTING WITH THE SABER & CUTLASS

"Fighting with the Saber and Cutlass" is really not for people who are only interested in gaining dexterity in sport fencing or to learn the superficial choreographic techniques used for stage and screen. There are plenty of resources available on the market for learning those skills. This DVD set is designed as a serious, straightforward, and focused course dealing solely with the combative use of the saber and cutlass.

The series begins by illustrating how to properly oppose an opponent who is armed with a weapon that is similar to your own. This is the best way to build the necessary foundation of skills, techniques, and eye-hand coordination that will allow you to oppose a wide spectrum of adversaries who are armed with all kinds of street weapons.

After learning and refining these basic skills you will be ready to progress to the seldom taught subjects of infighting, grappling, and brawling with a saber. There is even a section on how to throw a saber with great effect in a combat situation.

COVERED TOPICS

- Gripping Methods
- Ready Stance or On Guard Position
- Footwork Methods
- Fighting Ranges
- Seven Primary Cutting Methods
- Five Primary Thrusting Methods
- 8 Essential Parries
- Cut, Thrust, and Parry Drills
- Ripostes
- Combat Strategy
- How to Recognize and Create Openings
- Infighting
- Grappling
- Brawling
- Throwing the Saber or Cutlass

WARRIOR'S EDGE DVD COLLECTION

EDGED WEAPONS TRAINING DVD SERIES

I am not enamored with the saying: "If you get in a knife fight, expect to be cut." That saying condemns even a highly skilled knife fighter to be wounded, disfigured, disabled or even killed if ever forced to put his training with a blade to the test. This is why I have spent an enormous amount of time in full contact sparring with my training partners to develop a knife fighting method that allows the properly trained fighter to vanquish his enemy with minimal risk of being cut or stabbed in the process.

I have borrowed heavily from Western Fencing, and Filipino Martial Arts, including Lameco Escrima, Japanese Ken Jitsu, and Western Boxing as well. I have even added techniques and methods that are entirely my own.

The result of this effort is a knife fighting method which stresses the avoidance of close range in favor of long range techniques aided by footwork, rhythm, timing, speed and superior tactics and strategy.

Recognizing that many of my customers can't attend our seminars on this subject, I have condensed our basic, 6 volume course into a set of 3 DVD's (two volumes on each disc) so you can now study and train in the comfort and convenience of your own home. What's more, I guarantee that if you study them faithfully and practice diligently with a training partner you will gain the skill and ability necessary to give you a huge advantage if ever forced to defend your life or a loved one's with a fighting knife.

Lynn C. Thompson,
President,

SJAMBOKS

In Africa, the Sjambok (Sham-Bawk) is a cattle prod, a whip, a riding crop and a means of self-protection. Unlike most western style whips, the Sjambok is not plaited from thin leather strips. Instead, it is carved whole out of Hippopotamus hide. Its considerable reach, lightning speed and devastating impact have built it quite a reputation as a sure defense against deadly snakes. The new Cold Steel® synthetic Sjambok hits just as hard as one that is made out of the traditional Hippo hide. It was designed with input from our friend Peter Mueller. It's 25% heavier than our earlier model and features a much softer, more comfortable, Kraton® handle that's made to resemble braided leather. This bigger, thicker handle, when combined with the heavier, beefier lash allows our new Sjambok to be swung with even greater power and control, making it a must-have whip for city people and country dwellers alike.

54" and 42" Sjamboks are available in both black and brown colors.

SELF DEFENSE WITH THE SJAMBOK

In addition to its use as a cattle prod, whip, and a means of self protection, the African Sjambok is also known as a formidable snake killer. Its considerable reach, lightning speed and devastating impact make child's play of dispatching some of the biggest snakes. And you can imagine how devastatingly effective it is on two legged predators as well. A light blow can raise a serious welt while a heavy stroke can cut through thick clothing as efficiently as a razor, leaving a fearsome yet non-lethal wound.

In this new DVD, entitled Self Defense with the Sjambok, Lynn Thompson, President of Cold Steel® and Chief Instructor of our training division will teach you how to use the Sjambok to defend yourself and your loved ones.

HERE'S JUST A PARTIAL LIST OF THE SUBJECTS COVERED...

- Advantages of the Sjambok as a weapon.

AMERICAN EXPRESS DISCOVER MASTERCARD VISA \$25 MIN. ORDER

THE FIGHTING TOMAHAWK

The Tomahawk is a uniquely American invention. It can double as either a highly useful tool or as a ferocious piece of weaponry. It is, in fact, these two attributes that have endeared the Tomahawk to generations of countless Americans. Tomahawks, in many variations, have seen service in every armed conflict in our nation's history.

Unfortunately, up until now, there has been very little formal instruction on how to exploit the versatility of the Tomahawk and take advantage of its full potential as a weapon.

That is why, after 13 years of manufacturing and 15 years of research, training, and sparring, Cold Steel is presenting our new DVD, The Fighting Tomahawk. Here's just a partial list of all the topics covered.

COVERED TOPICS

- Advantages of the Tomahawk as a weapon.
- Customizing your Tomahawk.
- Specialized training; Tomahawks and safety issues.
- Gripping methods.
- Fighting stances and postures.
- Chopping, cutting, slashing, and hacking.
- Stabbing, slapping, hammering, gouging, and sawing.
- Pushing, pulling, and hooking with your Tomahawk.
- Avoiding blows, stop hitting, counter slashing, blocking, parrying, and using the empty hand.
- Disarm defenses.
- Stopping the charge.
- Strength and agility drills.
- Distance judging drills.
- Identifying an enemy's weakness.
- Creating and exploiting openings or opportunities.
- Fight strategy.
- Sparring drills, and actual sparring.
- Opposing other weapons.

THE FIGHTING SARONG

Ron Balicki will take you through a comprehensive look at the Indonesian and Filipino art of "The Fighting Sarong". To date this art is relatively unknown to the world. Ron has trained in Sarong fighting for over 20 years and is sharing his vast knowledge with you today. You will learn how to use the sarong against an attacker who comes at you with punches, kicks and grappling. Learn what to do if your opponent tries to counter you or grab onto your sarong. Ron will also teach you how to use the sarong to defend yourself against a knife. In this series you will also get a special section taught by Martial Arts legend Guro Dan Inosanto.

RON BALICKI'S VIDEO ON THE FLEXIBLE WEAPONS OF THE SARONG AND MALONG IS EDUCATIONAL AND INFORMATIVE AS WELL AS ENTERTAINING. IT IS A MUST FOR THE MULTI-DIMENSIONAL MINDED MARTIAL ARTIST OF THIS DECADE. HIS PRESENTATION IS EASY TO FOLLOW AND LEARN AND ANY MARTIAL ARTIST SHOULD REALLY BENEFIT FROM THIS VIDEO REGARDLESS OF STYLE OR SYSTEM.

- THE SARONG VS. THE KNIFE

THE SARONG

The Sarong is one of the most universally popular items of dress on the planet. Widely worn in both hemispheres, it's best known in the east, where it is common everyday attire from India to the Philippines.

Its popularity endures because it's simple and versatile. Cotton, or some other light strong cloth, is strongly sewn into a long wide tube. This tube can then be wrapped or folded around the body in a wide variety of fashions to suit the needs of both sexes. Sarongs aren't just ordinary items of clothing though, they're blankets, sunshades, cloaks, backpacks, and a formidable self-defense tool as well.

The Cold Steel® Sarongs come in a variety of colors and patterns and are sure to provide many years of service.

KITCHEN CLASSICS

The knives in Kitchen Classics series will race through just about any task you can imagine. These blades are ice tempered and then precision flat ground for maximum cutting power. All models in the series come with a razor sharp edge that lasts and lasts, and some have serrated edges uniquely appropriate to the tasks they were designed to do.

The handles are, in a word, terrific! Carefully designed to ensure a strong, secure, yet comfortable grip, they feature a stiff Zytel® core on the inside, with a softer, deeply checkered Kraton® exterior for the kind of non-slip grip that must be felt to be appreciated!

The Kitchen Classics are available for purchase as single items or as a complete set. The set includes an attractive counter-top oak stand, and one of each [except for the Steak Knife, which comes in a group of 6] of the knives shown here.

NEW GRIP!

MINI PAL™

For a small knife, the Mini Pal™ delivers heavyweight performance. It has an edge that zips through a host of materials at unbelievable speed. And, since the one inch long blade is razor sharp, it will open delicate packages and envelopes, cut rope or punch through heavy cartons with ease.

Also, the newly redesigned Kraton® handle totally encapsulates the tang and part of the shaft, for increased comfort and improved control.
The Mini Pal is not for sale in Canada, The United Kingdom, Australia or New Zealand.

SUPER EDGE™

This rugged little workhorse can cut through tough materials that would make a bigger knife "choke". Its diminutive overall length and feather light Secure-Ex® sheath make it a natural for attachment to a key ring, zipper pull, "D" ring or belt loop.

SPECIFICATIONS:

	Urban Pal™	Super Edge™
Blade:	1 1/2"	2"
Handle:	1 5/8"	2 5/16"
Thick:	2mm	2mm
Weight:	0.7oz.	0.8oz.
Steel:	420	420
Sheath:	Secure-Ex®	Secure-Ex®

URBAN PAL™

The Urban Pal™ should be standard equipment for survival in today's urban jungle. At less than half an ounce, it's perfectly at home in a pocket or purse and can be easily attached to a key ring, or hung around the neck.

The Urban Pal is not for sale in Canada The United Kingdom, Australia or New Zealand.

NIGHTSHADE™ SERIES

Black as a moonless night, silent as the grave, and totally undetectable...these are the qualities that make up our new lightweight Nightshade™ series. Most are detailed reproductions of existing Cold Steel® favorites and some are new designs representing the newest trends in high-tech, covert construction. Made from Grivory™ — the latest in fiberglass reinforced plastic, and stronger than even the super tough Zytel® we have used in earlier models— they are UV and heat stabilized, making them impervious to the elements.

One of the most unique features of these knives is their handles. They are made from deeply checkered Kraton® that has been molded directly to the blade tangs. The use of Kraton in knife handles is a Cold Steel® innovation that dates back to the early 1980's. It has been readily copied by most of our competitors

because it offers a superior, slightly tacky, gripping surface that is unaffected by heat, cold, or moisture. It never rusts, warps, cracks or splits even in the most extreme environments.

Our Nightshade™ knives are light enough to be tied, tucked, or taped just about anywhere on one's person. And, since they are impervious to heat, cold, moisture and extreme weather they are a natural to hide both inside and outside of your house. They can be hidden virtually everywhere from the hedges and flowerpots in your yard, to the refrigerator, bookshelves, and closets in your house. Keep one in every room of the house, from the laundry room to the bathroom shower! With violent home invasions on the rise a strategically placed Nightshade™ knife could save the day, and even your life.

BIRTH OF THE BROOKLYN SMASHER

BY WILLIAM MCCLURE

One of our nation's favorite outdoor games is being plagued by an epidemic. Turn on any major league baseball game and you may very well see the infielders not only moving to field the ball, but dodging splintered bats as well. It has become so severe that it was noted in a recent L.A. Times article that this problem has grown to the point that about 10 bats per game were being broken. Clearly something is awry; bats are breaking at a furious pace unmatched in the history of the game. Because of this problem, Cold Steel has been in the process of developing a bat that is superior to the products now on the market. That product is now here.

With great pride, Cold Steel would like to introduce the birth of the Brooklyn Smasher.

The Brooklyn Smasher is a bat 20 years in the making. For the last two decades founder Lynn Thompson has been interested in the baseball bat because of its potential use as a weapon. In his research, the bat intrigued him for many reasons; one being that a hard hit in the head from a bat is almost always lethal, making it a very useful item for self-defense. Also, the baseball bat is the most common improvised weapon kept in the home. Under many beds, countless closets and innumerable car trunks, the baseball bat rests, ready to be pressed into service at a moments notice.

Yet it was not until Cold Steel developed bikkens for the LAPD that Lynn began to take the idea of a baseball bat seriously. He was contacted a few years ago by a sergeant who complained that their traditional issued wooden bikkens had a nasty habit of breaking. Wanting to take the strong craftsmanship that make all of Cold Steel's products, Lynn Thompson got to work with various designs. Faced with this challenge, Cold Steel bikkens were designed using high-grade

and sending shattered particles through the air, since flying splinters are one of the major causes of injury and blindness in the United States. Cold Steel has a history of hiring disadvantaged people who are blind in one eye, so they are sensitive to the dangers of this type of problem. Realizing it was possible to make a better product, Lynn began the process of developing a superior baseball bat.

With research forays that sent him to China and all across the globe, Lynn Thompson came to a laminated bamboo plant that claimed to make unbreakable products. Intrigued, he purchased \$1500 dollars worth of allegedly unbreakable laminated bikkens and baseball bats to test at home. Back at the office, he put them through the rigorous tests that have perfected all of the products of Cold Steel. After only five hard strikes, the laminated bamboo sword broke; clearly the producers were mistaken by its indestructibility. He knew there had to be something better out there. He was right.

Wood had to be out of the question. Major leaguers have been using both ash, which is lighter and slightly flexible, and maple, which is heavier and stiffer. There is a debate in baseball about which one is better, yet there are problems with both. Ash may splinter less, but they commonly crack along the grain. Maple, on the other hand, is likely to break and fly apart, even if you hit it in solid part of the barrel. Both bats have their deficiencies, and with the decreasing thickness of the handles of bats, they are going to continue to break at a dizzying pace.

Aluminum or other metals were also a consideration. Little leagues all across America employ metal bats, as well as high schools and colleges. Yet upon examining a metal bat, their flaws are instantly noted; they are not indestructible. Over time these bats wear and fade. They also dent, crack, and lose their integrity. Aluminum bats, to be effective for baseball, have to be hollow inside. This leads

about shards flying all over the field when you swing. There is no more having to shell out money every month to purchase a new bat. No matter what you hit, no matter how hard you swing it, this bat will not break. It won't crack, it won't rot, it won't rust, it won't fade. It is solid and strong, and it proudly bears the name Cold Steel.

There is simply nothing else like it.

This bat is clearly the next step in the evolution of baseball bats, as the history of the bat shows us. For early American ballplayers in the first half of the nineteenth century had no rules whatsoever in regards to the design and make of their bats. Since the game clearly had historical ties to cricket (a British game that uses a flat sided bat), American ballplayers used everything from an almost cricket-shaped tool to clubs of wood that appeared to be a good fit with the game. Heavy and light bats were experimented with, as was every possible shape and size. After this period of experimentation, it was generally agreed that a round shaped baseball bat was the most effective fit for the game.

Over time the game began to evolve. In 1859, baseball made a rule that no bat could have a diameter larger than 2.5 inches, and only a decade later they added to their rule and said that no bat could be longer than 42 inches (the average professional's bat is around 34 inches); this rule still stands today. Almost a hundred years went by with little advances in bat technology other than the development of the Louisville Slugger® type bat. Bats during this time were relatively simple, for they were all about the same and made out of Ash.

Yet in 1970 advancements in the area of metal gave inventors the idea of a metal bat. Companies like Worth® and Easton® began to market bats that were metal, and many of these early metal bats may still be lying under people's beds today. The problem with these early metal bats was that they were fairly solid and did not fit right in the hand. But like always, as technology advances so do the products on the market. The 1990's brought modern bats farther still, with various alloys infused into the bats as well as pockets of air that allowed bats to not only have more pop, but be lighter too.

These lighter bats may have good pop with the ball, but they are far from indestructible. Also, as is chronicled above, the aluminum bat has deficiencies that make it a poor tool for training and self-defense. For this reason, Cold Steel has taken baseball technology forward. Clearly the bat has evolved and now moved into the 21st century; Cold Steel, in introducing the Brooklyn Smasher, has taken bats to a whole new level. Never before has a bat had the advantages that the Smasher has. It is the next step in the evolutionary process of the baseball bat.

The Brooklyn Smasher has many of the benefits of both wood and aluminum without the irritating drawbacks. If you were to ask ballplayers about their preference, most would prefer the sound and feel of wood. Baseball has been played for over a century with the beautiful crack of wood ringing in the air.

UNDER THE WHEEL OF A PICKUP TRUCK!

Stresses like this would splinter a wooden bat and put a permanent dent in an aluminum one, but the Brooklyn Smasher holds its own!

plastic, and it turned out so well that they began to consider the possibility of using this technology in other areas too.

What proved to be the last straw for Lynn was the recent article in the L.A. Times that chronicled the frustrating tendency of modern bats breaking. The article went on to note that Jared Washburn "shuddered and saw the spiked end of a broken bat sticking in the mound during a recent game." Not only are the bats cracking and breaking, but they are splintering and flying apart. It is appalling how easy they are breaking

to a variety of problems; one being that they don't stand up under great pressure.

The problem was simple; was it even possible to create a bat that wouldn't break? Wood wouldn't work, metal was out of question, and so was reinforced bamboo. Was there a solution?

The answer to that question came in the form of precision injection molded polypropylene, the heaviest grade Cold Steel could find. The Brooklyn Smasher is made out of this dense material, making it literally unbreakable. There are no more worries

Compare that sound to the ting of metal bats, and it is clear that wood is superior in sound and feel. Luckily for the baseball aficionado, Brooklyn Smashers have a solid look and feel much like wood. They are molded with a grain similar to a high quality wooden bat. Also, upon contact with a ball, they have a much more satisfying feel than metal.

Another feature of the Smasher is that it has a thicker handle than most modern bats. Because of the desire for home runs in recent years, bats have become fatter through the barrel, while shaving off diameter around the handle. The belief is that by cutting down the dimensions of the handle and adding it to the barrel, the hitter will be able to generate more bat speed and whip through the hitting zone. The unfortunate result is that by restricting these dimensions, the bat loses some of its structural integrity.

These unique specifications make the Brooklyn Smasher ideal for baseball practice and training. At every level, tee work and batting practice are the most essential tools in developing the hitter's skills. This bat lends itself well for this purpose. The density has a great feel in the hitter's hands, and since it is made in the more traditional style of American baseball bats, the bat is slightly heavier than a wooden or metal bat of similar length. This disparity causes the hitter to develop the quick hands and reactions needed to succeed in the game. Also, it has already been noted that all types of bats need to be replaced quite often because of constant use. That will not be the case with this bat. It will never wear down and deteriorate. If someone were to leave it in the cold, leave it outside, knock it around or treat it roughly the bat would suffer no negative effects. It will be a perfect hitting tool for as long as it is needed.

As a baseball player myself, I know how frustrating it can be to have to purchase bats every season. Growing up in the year-round warmth of Phoenix, Arizona, I was never far from the baseball field. Early on in childhood I found a love for baseball, and as my love grew so did the time I spent on the field. The crack of the bat that is so distinguishable in American culture became music to my ears. All my time and effort was put into enhancing my growing ability.

And yet as I look back, I see a past littered with broken and tired bats. At every stage of my game I had to purchase another bat. Both metal and wood were necessary, and I almost cringe at the cost of those various tools. For much like golf, in order to better your skill you must practice hundreds of times every day; I did that. Almost every day I would leave school and head to the field where I would take hundreds of swings off of the tees, in various drills, and off live pitching. With every hit my bats were wearing down. With every season I found myself necessarily in the possession of a new one.

By the time I reached high school I knew that I was going to at least be able to go one to the college level, and at that realization my work efforts doubled. I began serious training and sought the help of anyone I could find with knowledge of the game. Local scout teams, which represented major league ball clubs that were grooming the best talent in various regions of the U.S., were sprouting up, and I was a player on one. We would travel all over the state of Arizona as high school players playing colleges in practice games. Scouts from various teams would attend, and many of the players on my team went on to play professionally. In these games against colleges, we would not swing metal, which is what we used in traditional high school play, but we played our games with wood. The reason for this was to give the local scouts a chance to see us play with the same material that pros used.

This is far from an uncommon practice. As players progress in their game and begin to get ready for high school, most begin to exclusively practice with wood. The reason for this is that wood does not have as much explosion off the bat head as metal, so the players who believe that they are headed eventually to the major leagues get prepared by swinging wood. Yet as it has been mentioned, wood constantly breaks; I know this first hand. Players who swing their wood all the time will go through a ridiculous amount of wooden bats over a season. It is a costly and necessary expense to the budding ballplayer.

My history in baseball is no exception. There are littered bats lining my path through my baseball career. Looking back, I wish I had been introduced to a tool like the Brooklyn Smasher. I can see exceptional benefits to a bat like this. For starters, I would not have had to shell out money constantly for bats that were breaking. The Brooklyn Smasher is too tough to ever break. Those hundreds of swings that I took every day are no match for the truly solid work of this bat. I can see great upside in making this your everyday practice bat. First, it won't get worn down. Also, it has a feel and connection with the ball that is very similar to wood. The upside to this is that the player who is training to go further in their game will be able to get the benefits of wood without the irritation of breaking the bat.

Baseball continued to take up a large majority of my time into college. Since I was skilled enough to go to college on a baseball scholarship, I had to keep up my skills constantly. Especially on the college level, coaches are trying to get their players prepared for the next level by using wooden bats in practice, and yet, the bats break constantly. I wish this bat had existed back when I was in college a few years ago. If it had existed, there is no doubt that it would have been a constant tool in my baseball workout.

In all truth, this bat is perfect for any level of ball player. The reason is that by swinging a slightly heavier bat with a connection similar to wood, every player will boost his hitting skills with aluminum. This is clearly a great thing because today's rule with young players is that they swing metal bats in competition. By getting them used to the traditional play of the game, a young player learns the valuable lesson to hit the baseball all over the field and not just go for homeruns (which is what often happens with young players. They get a metal bat in their hands at a young age, and they never realize how to master the art of hitting. This bat will change that.). Through the use of this bat, I would expect that players also begin to notice an increase in their bat velocity, which is the determining factor in how far a player can hit the baseball.

Far from speaking out of ignorance, I myself am a coach of a local high school in the Phoenix area. In looking towards the future of my season, I will be using this bat as a tool to train hitters in practice to hit better in games. From everything I have seen with this tool, I have no doubt that the players at my high school will see tremendous results from using the Brooklyn Smasher. I believe in using a baseball tee to train their hands and eye coordination, and it is my belief that by using this

bat I will be enhancing that. There are players at my school that clearly have aspirations for higher levels of baseball, and many of them use wood. Overall I am excited to introduce them to the Brooklyn Smasher because it will give them an opportunity to own a bat that will not need to be replaced. It will be a wonderful training tool to hone their abilities.

Its benefits in baseball are numerous; its benefits for self-defense are equally long. The bat has been used as a weapon for as long as it has been used for sport. Yet both wooden and metal bats have their drawbacks in a pinch. A wooden bat will often break when it strikes a body or a hard surface. To combat this, people who carry a bat for defense will attempt to wrap the bat with tape. The problem with wrapping a bat like this is that it exclusively becomes a weapon, and many states will consider it a club and illegal. Also, it becomes unwieldy when wrapped like this. The Brooklyn Smasher will never break and needs no tape.

Metal bats also have serious drawbacks. What many don't think about is the

sting in the hand associated with metal. I remember a time growing up where we played a game in drizzly cold rain, and the temperature was around 32 degrees. As I stepped to the plate, the rain dripped down over the brim of my helmet and my hands were cold, and since I liked to have a good feel with the bat, I rarely wore batting gloves. When the pitch was thrown, I swung with all my might and connected well with the ball, but unfortunately my hands felt destroyed. For the rest of the game my numb hands rang with the sensation of the metal. This was not the only time that this occurred during my playing years, for with metal it is a common sensation. When struck on hard surface, metal bats will send shocking sensations up the arms. And just like in baseball, in defensive situations you are not going to always strike your target. If you miss with metal and hit a pole for instance, a metal bat will be shockingly uncomfortable in your hands. The Brooklyn Smasher, because it is made out of plastic, will be perfectly fine in the same situation.

In fact, the Brooklyn Smasher has serious advantages in a fight. Besides the fact it is unbreakable and wields well in a person's hands, its finish has advantages all its own. The dense plastic finish will stand up well against an edged weapon and help keep the weapon from sliding down to the bat wielder's hands. On an aluminum bat, a knife or sword might slide down the metal finish and strike one's hands. With the Smasher, it's much more likely that the blade will slightly nick the surface of the bat, doing no damage to it, and keep the blade from sliding. These benefits make it function well as a cross over trainer to develop strength, agility and eye hand coordination for those studying Western Saber Fencing, Kendo, Kenjitsu, Filipino stick and sword fighting, and Chinese martial arts.

When compared to the other bats on the market, the Brooklyn Smasher far exceeds the competition. And at a price of only \$45, it is priced similarly to good wooden bats, but will last infinitely longer. Whether you play baseball or desire a simple yet effective defensive weapon, the Smasher is the way to go.

RUBBER TRAINING KNIVES

Now you can practice with some of our most popular knife designs, in relative safety, with our rubber training knives. We have rubber training versions of our Peace Keeper™ I, the R1 Military Classic, Recon Tanto, and the Black Bear Classic. Each has been carefully fashioned to look as realistic as possible so they can be effectively used in solo practice, training drills, disarm drills, and demonstrations and any other activity where you want a reasonably close approximation of realism but not the extreme danger and risk associated with an actual knife. The Santoprene rubber blades are soft enough to prevent the likelihood of most bodily injury. They do however, have a level of firmness that might cause injury to the face or the eyes, so it is recommended that appropriate eye protection or a fencing mask is utilized at all times when using a Cold Steel® rubber training knife.

KOGA SD SERIES

Bob Koga began his martial arts career at an early age beginning with Judo at 12 and moving on to wrestling in high school. After graduation Bob joined the Air Force and, while stationed in Japan, he resumed his Judo training as well as studying Jiu Jitsu, Jo-do and Aikido. After finishing his stint in the Air Force, Bob moved to Los Angeles where he joined the LAPD and served with great distinction for 25 years. During his tenure with the LAPD, Bob became widely recognized as an outspoken proponent of the straight baton as opposed to the PR24® or side handle baton (currently popular in departments across the land).

Made of virtually unbreakable plastic, the SD can increase the ability of the average person to defend himself several times over. With proper training, it can function as a fantastic aid in leverage when obtaining joint locks or submission holds. But where it really shines is as an intermediate impact tool. You see, police and civilians alike face a perplexing dilemma when contemplating employing fist or baton blows. Blows struck with the fist may be too weak, or worse, result in a broken hand, while blows struck with a baton may be too powerful resulting in grave injury or even death. The SD however, solves this problem, neatly bridging the gap by concentrating and magnifying the effect of hand blows while minimizing the likelihood of permanent injury or death. If you're looking to expand your continuum of force options in a self-defense situation, we heartily suggest you buy a Koga SD.

BROOKLYN SMASHER™

"It's unbelievable. We're seeing eight to 10 bats break every game. Guys are coming back saying they hit the ball on the sweet spot and it still broke." This quote caught our President, Lynn C. Thompson's attention. It's from an article in the Los Angeles Times describing how frequently baseball bats break and nearly injure the players in major league games. The article chronicled the debate currently raging among players over which bat is better, those made of ash, which is lighter and slightly flexible, or those made of maple which is heavier and stiffer. As he read, Lynn began to suspect there might be a market for a baseball bat that just couldn't be broken. What kid, let alone an adult, wouldn't want an unbreakable bat? Now Cold Steel is proud to offer you our first foray into the manufacturing of athletic equipment, the Brooklyn Smasher.

NEW

Because it's precision injection molded out

of the heaviest grade of polypropylene we could find, the Brooklyn Smasher just can't be broken. There's no need to worry about shards of wood flying in your face. No matter what you hit or how hard you swing it just won't break. And its durable too, it won't rot, crack, or splinter, or even fade. You can treat it as roughly as you choose. You needn't worry about dirt or the weather affecting it either since it's impervious to the elements and cleans up with soap and water. Try that with a wood bat and you might damage it.

It's versatile too. The Brooklyn Smasher, like any other baseball bat, croquet mallet, golf club or hockey stick can be used in an emergency, as an extremely effective self defense tool. You can keep it behind the front door, under the bed, or in a car trunk and forget about it until you need it. It can be used as a game bat, practice bat, warm-up bat, loaner bat, inclement weather bat, school or league bat or kid's bat. It can also serve as a cross over trainer to develop strength, agility and eye hand coordination for those studying Western Saber Fencing, Kendo, Kenjitsu, Filipino stick and Sword Fighting and Chinese martial arts.

Best of all, it makes good economic sense. With a suggested retail price of \$45 it's comparable in price to a good wooden bat, and since it's unbreakable it will last far longer than any wooden bat on the market.

SPECIFICATIONS:

Weight: 2 lbs. 7oz
Overall: 34"
Thick: 2" (handle)
2 3/16" (tip)

BOKKEN

Hundreds of years ago, the Japanese discovered a simple truth; that to become a good swordsman you'll have to practice, a great deal. To become a great swordsman you'll have to practice with a "live blade". And during the period between 'good' and 'great', you should spend your time building your skills and confidence enough to wield a razor sharp Katana safely and effectively.

To accomplish this, the Japanese relied on a simple wooden sword called a "Bokken" for much of their training. It was made from the super tough wood of the Japanese Green Oak tree, a wood they called Kashi. The swords produced from this wood had the advantage of replicating the size, weight and feel of a steel sword, while minimizing the possibility of causing grievous or permanent injury to those who used it.

Authentic Kashi wood Bokkens are still used today, but are becoming quite costly. They also have the disadvantages, being made of wood, that they may rot, crack split or splinter. Cold Steel's solution to these dilemmas was to design a synthetic substitute, low in price and impervious to the elements. Our Bokken is made of the heaviest grade polypropylene available and closely duplicates a real Katana in length, size, weight and feel. And while it is not quite as rigid as wood, it has the advantage of being virtually unbreakable as well as remarkably stiff and cut resistant. And, when you're ready for a "live blade", your Bokken is still a great candidate as a "last ditch" hide out weapon that can be hidden just about anywhere inside or outside your house.

SPECIFICATIONS:

Weight: 17.7 oz.

BODYGUARD PLUS™

WHAT'S BODYGUARD PLUS?™

It's an instantly effective, organically based, non-lethal, self defense spray utilizing Oleoresin Capsicum and black pepper suspended in a non-toxic liquid propellant base.

HOW DOES IT WORK?

A one second burst to an attacker's face will induce choking, coughing, sneezing, burning skin sensations, and nausea. His eye capillaries will swell, which will produce a kind of temporary blindness (in the sense that he will be preoccupied with the burning sensations and tearing caused by the spray).

The mucous membranes (respiratory system) will be affected too, making it difficult, but not life threateningly impossible, for him to breathe. The cumulative effect of this spray will be a rapid "Knock-Down" allowing you ample time to escape further attack.

HOW LONG DOES IT LAST?

The effects of the spray are temporary and will normally dissipate within hours.

- MAINTENANCE FREE
DOES NOT DETERIORATE
- HOTTEST, MOST
EFFECTIVE SPRAY
AVAILABLE
- STOPS ATTACKERS
INSTANTLY, INCLUDING
THOSE UNDER THE
INFLUENCE OF DRUGS OR
ALCOHOL
- PROVEN SUPERIOR TO
TEAR GAS AND OTHER
SPRAYS
- NON-TOXIC INGREDIENTS
- NON-FLAMMABLE
- FBI APPROVED

THIS IS THE MOST DEVASTATING, NON-LETHAL, SELF DEFENSE PRODUCT I HAVE EVER SEEN. I TOOK A FULL BURST RIGHT IN THE FACE AT POINT BLANK RANGE AND IT WAS HORRIBLE. MY FACE WAS COVERED IN A THICK ORANGE SLIME OF BURNING HOT PEPPER EXTRACT THAT WAS BLINDING AND NAUSEATING. IT WAS EXTREMELY PAINFUL AND TOTALLY TOOK THE FIGHT OUT OF ME FOR ALMOST AN HOUR!

TWO HANDED MACHETE

Some big cutting jobs are often best handled by using both hands and that's where our two handed machete comes into its own. Its long polypropylene handle and tough 1050 carbon steel blade give you the leverage to cut down small trees as well as thick brush and tangled vines. Weighing just under two pounds and measuring 32" in overall length, it's light and compact enough to lash to your pack and is a natural to stash in your vehicle, boat, or airplane.

In a self defense emergency, the Two Handed Machete will also double as a highly effective sword. It's light enough to be swung with either one or both hands and delivers enough cutting power to lop off heads and dismember limbs.

SPECIFICATIONS:

Weight: 1lb. 14.9oz.

MACHETES

The machete has proven to be the ultimate outdoor and survival tool. It will cut, chop, slash, or smash just about anything you can put in front of it.

It can be used to kill both fish and game and will also field dress and prepare them for the table as well. And when you look at its meager cost, it's got to be one of the best bargains for the money.

These blades are made out of SAE 1055 medium carbon steel and are dipped in a special anti-rust solution before having a black baked on finish applied. Each Cold Steel® machete comes with a good utility edge that will cut right out of the box and, with just a little work, it can be made hair shaving sharp. The handles of our machetes are designed to provide a comfortable secure grip, yet they resist chipping, cracking or breaking, and last practically forever.

KUKRI MACHETE

There's no single edged weapon that we can think of that can out-chop or out-cut a good Kukri. It's true that the best Kukris, like our LTC and Gurkha models (see pages 26 and 27), can be somewhat expensive. While those "thoroughbreds" perform extraordinarily well for the money that they cost, it sometimes seems that what's required is a good, inexpensive, "workhorse" model.

Our Kukri Machetes are those workhorses. They are available in two sizes, one has a thirteen inch blade and the other, our new "Magnum" model has a whopping seventeen inch blade. Both are ready to plow through the toughest chores life can dish out. Each features the distinctive weight-forward balance of our "top-of-the-line" models, and always present their edge on an angle so they're guaranteed to "bite" deep with every stroke. Additionally, they come complete with a sturdy Cordura sheath! They're a solid value, ready for long, hard work.

LIGHT MACHETE

Perfect for cutting grass, weeds, vines, brush, and briars. This machete is used frequently in Africa for harvesting corn and other crops.

HEAVY MACHETE

The heaviest machete we make (with the exception of the Two Handed model). The blade widens toward the tip for maximum cutting and chopping power.

BOLO MACHETE

Known throughout Asia and Pacific Rim, the Bolo Machete features a "fat" point that shifts its weight forward where it can do the most good when heavy chopping or slashing is called for. As a survival tool, it will open a coconut or chop down a tree with equal ease.

PANGA MACHETE

The standard machete for the entire African continent. It's excellent for cutting thick brush and chopping down saplings and small trees.

DOUBLE EDGE MACHETE

Versatile. That, period, paragraph, is the only word to describe this machete. Perhaps you might keep one edge thin for the light vegetation and the other a little on the thicker side for the heavier stuff. Or keep both edges equally sharp so that when one edge gets dull after heavy use, you can flip it over and keep on going. Two edges beats one every time!

LATIN STYLE MACHETES

Have you been looking for a machete with extra reach and leverage? Perhaps something with a more traditional style blade and handle? Then Cold Steel has the tool for you! Our Latin Style Machetes are available with either eighteen or twenty four inch blade lengths. With their non-slip, shock absorbing rubber handles, they are perfect in almost any environment from the jungle to the forest or even on the farm.

SPEARS

Our spears make for a unique, and athletic target throwing experience! Like traditional spear heads, ours are heat treated and then drawn to a tough spring temper. This process enables the spear head to flex or bend under impact stresses rather than break.

The Assegai, invented by the legendary Zulu king Shaka in the early 1800's, revolutionized tribal warfare in Southern Africa. Our version is available with your choice of two different shaft lengths!

The Boar Spear, is a modern re-creation of a design that dates back to the European Renaissance. It is cold forged out of medium carbon SK-5 Steel and, like our other spears, is heat treated to a spring temper. The spear shaft is made from extra stout premium ash.

The Samburu Spear, is based on a design used by the Samburu tribe from Kenya's northern frontier. It's perhaps the most advanced spear of its type. With this extraordinary spear, warriors routinely dispatch marauding leopards, lions and even firearm toting bandits at unheard of distances.

DROP FORGED TOMAHAWKS

These superb tomahawks are precision drop forged from medium carbon 5150 steel. Drop forging is, without doubt, the best method of manufacture for any impact weapon, particularly one with a cutting edge. During the forging process a metal ingot is heated almost white hot and then formed into shape in a series of progressive dies. The large steel dies are fixed to enormous compressed air hammers. Each die hammers the hot metal into a gradually more finished shape. The steel is kneaded and compressed

into a completely homogenous mass making the grain structure uniform and minimizing gas pockets or other imperfections that can ruin the construction of a hand forged hawk. This is why most good axes, hatchets, and hammers are drop forged.

These hawks are differentially heat treated. This means that the cutting edge and hammer face is fully hardened, while the balance is left relatively soft to absorb the shock of striking blows.

WAR HAMMER

Medieval war strategists developed this effective solution to the problem of plate armor, which is impervious to most swords but completely vulnerable to a weapon like the War Hammer.

The heavy hammer head could crush the strongest helmet or suit of plate armor with just a few blows and the back spike could rip through like a modern can opener! Now Special Projects brings you an inexpensive, yet

highly effective, recreation of this awesome weapon. It includes a straight grain 30" long American Hickory handle, providing tremendous leverage so enormously powerful blows may be struck. To protect the handle from assault by an opponent armed with an edged weapon we have included a pair of sturdy steel langettes. (Some assembly is required. Instructions and screws are included).

VIETNAM TOMAHAWK

It took Peter LaGana a lifetime of armed combat and months of design and testing to perfect the Vietnam Tomahawk. Now, there's an exact replica of this historic weapon.

Like the original Vietnam Tomahawk, our copy is light enough to be carried all day without causing undue fatigue. In combat, this lightness translates into speed; allowing quick changes in direction, even in mid-stroke!

The blade of the "hawk" offers a wide, upswept primary edge for tremendous cutting, slashing and chopping potential. The secondary edge on the lower side of the head is specially curved and partially sharpened for both a cutting and hooking attack. When combined with the "V" shaped spike on the back of the hawk head, it is wickedly efficient. It comes complete with a leather sheath in the original oxblood color.

NORSE HAWK

During the 10th century, Viking raiders were a familiar and dreaded sight. Ranging as far north as Russia and as far east as Constantinople, the Vikings wielded their terrible, fearsome battle ax.

The influence of the Viking weapon indeed far outlasted the reign of the Vikings themselves. Its sleek lines and brute strength may be seen today in axes, hatchets and tomahawks.

Our hawk has a curved cutting edge to facilitate deep, slashing cuts and terminates in two sharp points which are useful in hand-to-hand combat. The bottom point may be used to capture an opponent's shield, leg, arm, shoulder or neck, momentarily immobilizing or bringing him closer so that he'll be easier to deal with. The top point may be used to execute direct chops or, with a thrusting motion, to pierce or gouge. The Norse Hawk is like its ancient Viking ancestors; merciless.

TRAIL HAWK

Modeled after an early frontier pattern, our Trail Hawk can do it all. It's an excellent chopping tool and has a functional hammer poll with a hardened face so you can drive nails, hammer in stakes, and smash or crush just about anything. Best of all it's extremely lightweight and compact so it's a cinch to tuck it under your belt or lash it to a pack or shooting bag.

RIFLEMAN'S HAWK

The Rifleman's Hawk has a functional hexagonal hammer poll designed for serious work, like pounding nails or stakes.

Reminiscent of some early American designs, the Rifleman's Hawk features the "peace pipe" appearance that was commonly used by Native Americans during the last century.

In terms of fun and sport, this hawk throws and sticks extremely well.

If you want something that hits its target like the proverbial "ton of bricks," then the Rifleman's Hawk is for you!

FRONTIER HAWK

Conjuring up images of the American frontier from the French and Indian Wars to the settling of the West, the Frontier Hawk is one tough implement and an outstanding performer.

Its light weight makes the Frontier Hawk a highly functional camp hatchet, while causing minimal fatigue to wrist, elbow and shoulder. In combat, it can be wielded and recovered quickly after a long stroke. Authentic and effective, this Hawk is superior to anything offered by the competition.

SPECIAL FORCES SHOVEL

The Special Forces Shovel is modeled after the original Soviet Spetsnaz shovel. The Spetsnaz were the Soviet army's most elite unit, renowned for their deadly efficiency. Trained to travel light, the Spetsnaz packed only the bare essentials.

This included a unique shovel which had a broad flat blade and 3 sharp versatile edges. Our shovel follows the Soviet design as faithfully as possible with newer improvements in the steel (twice as thick as the original) and heat treatment.

SPECIFICATIONS:

Weight: 26.6 oz.
Overall: 50 cm (19.68")
Thick: 2mm
Steel: Medium Carbon

BAD AXE

Like the Special Forces Shovel, the Bad Axe is made of medium carbon steel, over 2mm thick and fully heat treated for strength. The edges of the Bad Axe have been factory honed to a sharp utility edge that can very easily be brought up to razor sharpness without too much effort.

The twin edge design offers double the cutting potential. When one edge begins to dull the other is razor sharp. Plus the axe cuts in either direction.

It has all the necessary weight for serious chopping, and for target throwing, it's remarkable! With all its points and cutting surfaces, it will stick in virtually any position.

SPECIFICATIONS:

Weight: 26 oz.
Length: 20" Overall
Width: 8 1/8"

THROWERS

TRUE FLIGHT THROWER

There are a bewildering number of throwing knives on the market these days, and it seems that most of them are made out of cheap steel that bends or, in the worse case scenario, stainless steel that breaks. That's why we made the True Flight Thrower.

The Cold Steel® True Flight Thrower beats the competition by a wide margin. For strength, we use our exclusive Carbon V® Steel which makes for a hard, yet resilient blade that will "bounce-back" from any throw. And for versatility, the True Flight Thrower has a utility edge that will stand-up to your toughest chores.

OPTIONAL
TRUE FLIGHT
SHEATH

PRO, SURE, & MINI FLIGHT THROWERS

We know you'll love the "professional style" of our Mini Flight, Sure Flight, and Pro Flight throwing knives. Because these knives have all the features you're looking for in a top quality thrower. Each knife is perfectly balanced for throwing and will accommodate either a blade or handle oriented throwing style. What's more, due to their super tough Carbon V® construction and durable black epoxy coat finish they'll stand up to literally thousands of throws. And to make your job even easier, we have incorporated a strong yet very sharp sure-stick™ point into their design that guarantees a hard hit and superior penetration.

TORPEDO

Heavy and perfectly balanced, the Torpedo is a lot of fun for target throwing. The double tapered points slide effortlessly from the hand for a perfect release and offer twice the sticking potential of a conventional throwing knife. What's more, the heavy 2 lb. weight lets you stand way back from the target (20 yards or more) and really "lob them in there" with surprising force.

At 15", the Torpedo is the longest throwing knife we know of. Thrown over hand or side-arm, it cuts a wide swath, dramatically increasing the chance of intercepting rising birds or fleeing small game.

The Torpedo is made from cold rolled 5150 steel. It is zone heat treated to provide maximum resistance to breakage.

BUSHMAN®

SPECIFICATIONS: Bushman®

Blade: 7"
Overall: 12 1/4"
Weight: 10.1oz.
Thick: 3/32"
Steel: Cold forged
SK-5 High
Carbon
Sheath: Cordura

#95BUSC Bushman®
Sugg. Retail: \$24.99
SPECIAL PROJECTS:
\$19.99

For the money, the Bushman® might be the strongest survival/ outdoor knife in the world! Unlike most hollow handle survival knives, there is no joint or seam between the blade and handle that requires a mechanical fastener. Instead, the Bushman's® blade and integral handle have been expertly cold forged out of a single piece of 2.5mm thick SK-5 high carbon steel. The resulting knife has been expertly heat treated and tempered to RC54 and, when subjected to our tests, has withstood over two tons of pressure on its blade/handle transition!

Every Bushman® blade has been carefully ground to an extra thin edge, and then honed and buffed by hand until razor sharp.

The Bushman® is versatile too! Its hollow handle will accept survival supplies or a variety of handle extensions which can maximize reach, leverage or ease of throwing. And, its continuously curved blade is ideal for skinning, and will pierce, cut, slash, slice and shear like you won't believe.

**THE BUSHMAN'S™ HOLLOW HANDLE
MAKES EASY STORAGE FOR SMALL
ITEMS AS SHOWN HERE.**

**THE HANDLE HAS A HOLE IN THE SIDE
THAT WILL ACCEPT A LANYARD CORD.**

AFRICAN WALKING STICK

The Zulus are perhaps the fiercest, most combative tribe in all South Africa. In the early 1800's the Zulu King, Shaka, subjugated the vast area of land between the Phongolo and Mzimkhulu rivers and laid the foundations for the Zulu Nation. Then in 1879 the Zulus handed the British one of the most humiliating defeats in history at the battle of Isandlwana, when they annihilated an entire column of 1200 Englishmen (who were supported by artillery and cavalry), and did it with little more than cowhide shields and their Assegais, or short stabbing spears. Even to this day, a Zulu tribesman is nobody to be trifled with.

The thing that distinguishes the Zulu people most is their fondness for using a Knob Kerrie, or walking stick. Our President, Lynn C. Thompson, who regularly hunts in South Africa, has amassed an impressive collection of these handmade sticks. Most of them are made from indigenous African hardwoods like Wild Olive, Pink Ivory, and Red Bush Willow, and are topped with a distinctive ball or knob.

EXAMPLES OF SOUTH AFRICAN KNOB KERRIES

Authentic South African handmade sticks like the ones shown here provided inspiration for our new African Walking Stick.

Adapted for the western marketplace, the Cold Steel African Walking Stick features some of the best parts of traditional Zulu Kerries like an undulating shaft, and the traditional geodesic ball grip. However, instead of using a costly exotic hardwood, we've made ours out of black Polypropylene. This means that, in addition to being unbreakable, it's also impervious to the elements. It will never rot, warp, crack, splinter, swell, shrink, mildew or fade, and it's ready for all the wear and tear you, and the world, can dish out.

Although its primary mission is to be a walking stick to aid one's balance when crossing uneven, slippery, wet or rough terrain, it can also serve as a pointer, lever, or probe. It also makes a formidable tool for self-defense in an emergency.

SPECIFICATIONS:

Length: 37"
Weight: 25.3oz.
Head: 2 3/4"
Diam.: 1 1/4" (base)
1 3/4" (neck)
Material: Solid Polypropylene

CITY STICKS

Here are some classy walking sticks that are just at home at the opera as they are on a stroll through the urban jungle. The City Stick's glossy black shafts are made out of eleven layers of fiberglass which, in impact tests, proved to be unbreakable. They're topped with a removable 300 series stainless steel head that can be easily engraved or modified to suit your tastes. At the base is a thick rubber ferrule for excellent traction.

Skull Head City Stick

This new version of our City Stick is sure to grab attention wherever you take it. Styled after earlier walking sticks, its finely chiseled skull-head motif is meant to be confrontational and is sure to provoke conversation among those who stop to admire it. And, like all Cold Steel products, it can be relied upon in a pinch. Cast out of thick-walled stainless steel utilizing the lost wax process, it will last a lifetime and serve you well in all of life's adventures.

WALKABOUT

The walking stick has earned its place in history. Every culture in human experience has utilized it in one form or another. To pay homage to this tradition and provide you with a quality tool, Cold Steel® presents the Walkabout XL.

Fashioned entirely in the United States from premium straight grained Ash specially selected to be free of all knots or flaws, the Walkabout XL is a prime example of the pride our craftsman take in their work. With a length of 37 inches, a weight of almost 20 ounces and a 2 1/3" knob, the Walkabout XL provides an extra sturdy balancing aid for traversing rough, slippery or uneven ground. It also serves as a pointer, probe, lever and emergency defensive tool.

Each Walkabout XL is turned from a 3 1/2" ash blank, carefully sanded and stained for visual appeal and then coated in clear polyurethane to protect it from the elements. Few other American hardwoods are better suited than Ash for a walking stick as it stands up to continuous use and is tough enough to withstand hard knocks. Every Walkabout XL comes complete with a brass ferrule that protects the stick from cracking or the excessive wear associated with concrete sidewalks and city streets.

WAX WOOD STAFFS

The wood from White Wax Wood saplings has been prized in China for thousands of years. It is an ideal material from which to fashion staffs, spear shafts, and walking sticks, because it is tough, hard and flexible and can absorb shock without breaking.

We were skeptical about this wood's reported virtues until we actually torture tested a White Wax Wood Bokken (wooden sword). We beat the living hell out of that sword and it remained unbroken. We were impressed enough to warrant adding Wax Wood to our line.

The White Wax Wood Staff is ideal "as is" for use as a virtually unbreakable spear shaft or can be cut down to your own preferred length as a walking, hiking, or training stick. It is available in 6 foot or 4 foot lengths.

The White Wax Wood Cane is made to extra stringent standards. This is one crook top cane that can take and deal out a whole lot of punishment. It's perfect for use anywhere and its crook top will support the heaviest man while making a convenient hook with which to corral wayward livestock or fleeing muggers.

BIG BORE™ BLOWGUNS

The blowgun or blowpipe has a long history that spans the globe. Many authorities believe it was first invented in Malaysia where it migrated through the Malaysian and Indonesian archipelago's finding its way to the Philippines and as far north as Japan. The blowgun, however, was not just a southeastern weapon; it also surfaced in the western hemisphere in the jungles of south and Central America, moving as far north as the southeastern United States.

Blowguns were originally invented to serve as a hunting weapon. They were used to bag small animals and birds, with small stones or hardened clay pellets being used for ammunition. Eventually, most hunters discovered that they could take much larger animals by the use of thin wooden darts that were laced with lethal poisons. The poison was derived from the sap of specially cultivated vines.

In the early 1960's and '70's, blowguns began to gain a small foothold in the United States. During this period, the Jivaro Blowgun Company ran a myriad of small advertisements for their .38 caliber blowgun. These were featured in the back of many adventure, gun and survival magazines. Eventually, in the late 1980's they faded away.

But the mystique of the blowgun itself did not fade away. Instead, a number of companies quickly jumped into the vacuum that was created by Jivaro's demise, and, by the early 90's, the market was flooded with a horde of cheap, poorly constructed blowguns. Most were sold as novelty items, with inefficient, short, 2 and 3 foot tubes made of paper-thin aluminum and firing an insipid .40 caliber dart. The only exception was the J.R. Stupero Company and their successor the J.W. McFarlin Company which sold an authentic hunting grade blowgun that was made of thick, strong Aluminum and was capable of propelling a heavy .625 Magnum dart.

In 1983, Cold Steel's President, Lynn C. Thompson, bought the first of the many .625 Magnum blowguns he would eventually own. He became an instant fan and has, over the last two decades, practiced exclusively with it. He has taken it on several hunting trips in the U.S. and has used it on three African Safaris! When the opportunity to acquire the J.W. McFarlin Company arose, Lynn purchased it outright, taking title to all of their trademarks and inventory.

Now, after a brief reorganizing period, we hereby inaugurate the birth of our new division; Big Bore™ Blowguns, home of the .625 Magnum™. Big Bore™ Blowguns will specialize in large blowgun calibers like .625 Magnum because they are capable of shooting darts that are 20% faster and three times heavier than our

competition. They offer vastly improved killing power compared to smaller, .40 caliber darts.

Since we are not interested in selling cheap, shoddy toys, we will concentrate on 4 and 5-foot blowguns. For extra accuracy and range, we sell a two-foot extension as an accessory. Both of the basic models come with a mouthpiece, rubber ferrule, dart quiver, and 36 darts (12 Stun Darts, 12 Mini Broad Head, 6 Hunting Broad Head, and 6 Bamboo). We also sell a 3-inch thick high-density foam target for safer indoor practice.

Large caliber blowguns like our .625 Magnum™ have an effective range out to 20 yards or more. With practice, a skilled user can hit a two-inch circle at amazing distances, delivering a heavy weight dart. That's a payload easily capable of penetrating a half-inch sheet of plywood.

Accuracy and range like this enable an experienced hunter to take small game like doves, quail, squirrels and rabbits in complete silence without danger of over penetration or errant darts striking livestock or humans in the distance.

Shooting a blowgun is great fun. It is an activity that can be enjoyed indoors or out, in sunny or inclement weather. Skill with a blowgun can lead to many inexpensive hunting adventures and stand you in good stead in survival or self-defense situations. Try our new Big Bore .625 Magnum™ and you'll soon find yourself addicted to the fun of shooting the world's most powerful blowgun!

TAKE AIM & FIRE...

To shoot our .625 Magnum™, stand in a comfortable, steady position and grip the tube with your dominant hand, positioning it near the mouthpiece. Position your other hand about sixteen to eighteen inches forward. Your elbow should be directly below the gun and the gun should be cradled comfortably and securely in both hands.

Now you're ready to load and shoot. Put a dart in the mouthpiece and press it in until it just barely slips past the anti-inhalation ring at the mouthpiece's end. Now point the gun at your selected target keeping your lips sealed against the mouthpiece and take a big breath through your nose (until your cheeks bulge like a squirrel's), then exhale suddenly and violently. The idea is to get a giant blast of air behind the dart so it will fly with the maximum velocity and the lowest possible trajectory.

COMPLETE SETS

INCLUDES A MOUTHPIECE, RUBBER FERRULE, DART QUIVER, AND 36 DARTS (12 STUN DARTS, 12 MINI BROAD HEAD, 6 BROAD HEAD, AND 6 BAMBOO).

SWORD CANES

We have been intrigued with the potential of sword canes ever since Major Morris Wright used one to grievously injure Jim Bowie in their famous fight on the Vidalia Sand Bar so many years ago. You see, there is no denying that a sword cane is an uncommonly handy weapon that can be put into action with lightning speed.

The blades on our sword canes are 24" long and have an overall reach of 31" when you include the head and handle. For maximum effectiveness, we have given our sword canes a stiff cruciform (4 sided) cross section and a wickedly sharp point.

There are few weapons that can be put into action faster than a sword cane. When your life is threatened, the sword cane is already in your hand. Just press the spring loaded release button to disengage the lock and give a firm tug and your blade will literally leap into your hand!

SWORD CANE FEATURES

- **VERSATILE SCABBARD**—The scabbard or shaft of our sword cane provides several benefits. First, with its rubber ferrule, it acts as a cane, giving support. Secondly, it safely and securely conceals the lethal sword blade. And lastly, it doubles as a highly effective impact weapon. Made out of 11 layers of laminated fiberglass, it can be swung faster than the speed of sound yet proved unbreakable in our impact tests.
- **QUICK DRAW**—There are few weapons that can be put into action faster than a sword cane. When your life is threatened, the sword cane is already in your hand. All you have to do is press the spring loaded release button to disengage the lock and give a firm tug and your blade will literally leap into your hand!
- **REMOVABLE HEAD**—Now you can customize your sword cane to fit your own personality. The head is removable so that it can be easily engraved or modified. If you're a good craftsman, you could even fashion your own cane head.
- **LETHAL PENETRATION**—The blade is 24" long and has an overall reach of 31" (including the head and handle). For maximum effectiveness as a stabbing tool, we have fashioned it out of spring tempered 420 stainless steel and given it a stiff cruciform (4 sided) cross section and a wickedly sharp point.

NOTE: SWORD CANES MUST BE PURCHASED FROM OUR TEXAS OFFICE. SEE THE ORDER FORM ON PAGE 83 FOR MORE DETAILS.

SWORD CANES ARE NOT LEGAL FOR SALE TO RESIDENTS OF CALIF. OR WISC.

"SKULL HEAD" STYLE

They say that variety is the spice of life, and our new Skull Head Sword Cane will surely add spice to yours. Styled after earlier sword cane heads dating back about a hundred years, its finely chiseled skull motif is a little confrontational and is likely to provoke conversation among curious onlookers. The finely sculptured features are cast out of thick-walled stainless steel, utilizing the lost wax process. It will surely last a lifetime, and make a fine addition to any collection.

Like our regular sword cane head, the Skull head is removable so that you can personalize it with engraving or other unique features.

Directions: From 101 Fwy exit South Victoria Ave., turn left on Olivas Park Dr., then left on Seaborg Ave.
Cold Steel is located at 3036-A Seaborg Ave.

The turnout at our first parking lot sale in May of 2004 was pretty overwhelming! But those crowds looked tame in comparison to the massive throng that came to our 2005 sale! It seemed that the word had gone out, far and near, to every fan and loyal customer that Cold Steel has; that this was one event that was not to be missed. For those who did miss it, don't get too discouraged about it, we will be having our third annual sale during the weekend of May 20-21, 2006.

Once again, you'll find incredible buys on closeouts, seconds, shopworn, returned and repaired items. And of course you'll want to peruse our sword aisles where we will be offering a huge selection of swords that just couldn't cut it to be sold as firsts. We will be pricing these swords at irresistibly low levels and showing live demonstrations of their cutting ability and toughness. We will also have the entire Cold Steel line on sale, and marked down drastically, making it well worth the effort to attend.
